Chemistry Volume I DSE Based on Syllabus of NEP 2020 is a comprehensive textbook that explores the intricate relationship between chemistry and the environment. Designed for students, educators, and researchers, this volume presents a planned study of fundamental environmental concepts and processes, integrating both theoretical and applied aspects. The book begins with a strong foundation in environmental chemistry and systematically covers the essential components of the environment, including the biosphere, hydrosphere, lithosphere, and atmosphere. It emphasizes ecological principles, classification of ecosystems, and the functioning of biogeochemical cycles, highlighting the circulation of nitrogen, carbon, phosphorus, hydrogen, and oxygen, which are vital for sustaining life on Earth. Further, the volume addresses critical environmental issues such as thermal pollution, noise pollution, and water-related concerns. Detailed discussions include the origin, physico-chemical properties, and sources of water, the hydrological cycle, criteria of water quality, and modern water management practices like watershed management and rainwater harvesting. The book also provides insights into water pollution, its sources, harmful effects, and control strategies. The atmospheric portion of the text examines the structure, major regions, and composition of the atmosphere, along with an in-depth discussion on temperature inversion and its role in air pollution episodes. This volume serves as an essential resource for undergraduate and postgraduate students of chemistry, environmental science, and related fields. It will also benefit academicians and researchers with sustainable environmental management.

Fundamentals Of Aquatic Toxicology Gary M. Rand, 2020-08-06. This text is divided into three parts. The first part describes basic toxicological concepts and methodologies used in aquatic toxicity testing, including the philosophies underlying testing strategies now required to meet and support regulatory standards. The second part of the book discusses various factors that affect transport, transformation, ultimate distribution, and accumulation of chemicals in the aquatic environment, along with the use of modelling to predict fate. The final section of the book reviews types of effects or endpoints evaluated in field studies and the use of structure-activity relationships in aquatic toxicology to predict biological activity and physico-chemical properties of a chemical. This section also contains an extensive background of environmental legislation in the USA and within the European Community, and an introduction to hazard risk assessment with case studies.
