Revolution Industry 4.0 in which implementation will improve many aspects of human life in all segments and lead to changes in business paradigms and production models. Further, new business methods are emerging, transforming production systems, transport, delivery, and consumption, which need to be monitored and implemented by every company involved in the global market.

Polyolefin Compounds and Materials Mariam Al-Ali AlMa'adeed, Igor Krupa, 2015-12-23 This book describes industrial applications of polyolefins from the researchers' perspective. Polyolefins constitute today arguably the most important class of polymers and polymeric materials for widespread industrial applications. This book summarizes the present state of the art. Starting from fundamental aspects such as the polymerization techniques to synthesize polyolefins, the book introduces the topic. Basic knowledge about polyolefin composites and blends is explained before applications. Aspects in different industry sectors are discussed. The spectrum comprises a wide range of applications and industry sectors such as the packaging and food industry, the textile industry, automotive and buildings, and even biomedical applications. Topics which are addressed in the various chapters comprise synthesis and processing of the materials, their classification, mechanical, physical, and technical requirements and properties, their characterization, and many more. In the end of the book, even the disposal, degradation, and recycling of polyolefins are addressed, and light is shed on their commercial significance and economic value. In this way, the book follows the entire lifetime of polyolefin compounds and materials from their synthesis and processing over applications to the recycling and reuse of disposed or degraded polyolefin substrates.

CO2 Emission Mitigation Through Energy Conservation - A Practical Guide Dr. M. Thirugnana Sambandam, 2017-01-01 There is a need for a text book containing practical case studies in the subject of energy conservation and associated CO2 emission mitigation for UG/PG level engineering and science students. This book is written keeping in mind the application part of engineering knowledge and skills so that learners and practicing engineers can really apply the techniques in the field. Application of engineering principles and the methodology of integrating with practice in reducing CO2 emission are presented in this maiden edition. The first chapter provides an insight into the nexus between energy consumption and CO2 emission and the needed for mitigation. In Chapter 2, a detailed survey is presented to highlight the need of energy conservation and the achievements made. The application of numerical tools for critical analysis of energy systems to quantify energy consumption and CO2 emission mitigation potential are reviewed and presented. Detailed discussions on energy audit, emission estimation methodology are enumerated in Chapter 3 to motivate the readers to understand and apply these strategies in the industrial environment. The cases of paper-based industry, cement, spice powder, and electronic contactors manufacturing industry are discussed for better understanding in chapters 4, 5, 6, 7. In chapter 8, the application of numerical method Computational Fluid Dynamics (CFD) to pressure drop analysis in compressed air pipe junctions, T and elbow are discussed with simulation results for energy and CO2 emission reduction. A brief introduction is presented on carbon capture in chapter 9. This book will be an eye opener for the readers looking for a career in the domain of Green Manufacturing and serve as a hand book for
