Architecture S For Children:

The Architectures of Childhood Roy Kozlovsky, 2016-03-16 Between 1935 and 1959 the architecture of childhood was at the centre of architectural discourse in a way that is unique in architectural history Some of the seminal projects of the period such as the Secondary Modern School at Hunstanton by Peter and Alison Smithson Le Corbusier's Unit d Habitation at Marseilles or Aldo van Eyck s playgrounds and orphanage were designed for children At CIAM architects utilized photographs of children to present their visions for reconstruction The unprecedented visibility of the child to architectural discourse during the period of reconstruction is the starting point for this interdisciplinary study of modern architecture under welfare state patronage Focusing mainly on England this book examines a series of innovative buildings and environments developed for children such as the adventure playground the Hertfordshire school the reformed children hospital Brutalist housing estates and New Towns It studies the methods employed by architects child experts and policy makers to survey assess and administer the physiological emotional and developmental needs of the user the child It identifies the new aesthetic and spatial order permeating the environments of childhood based on endowing children with the agency and autonomy to create a self regulating social order out of their own free will while rendering their interiority and sociability observable and governable By inserting the architectural object within a broader social and political context The Architectures of Childhood situates post war architecture within the welfare state's project of governing the self which most intensively targeted the citizen in the making the children Yet the emphasis on the utilization of architecture as an instrument of power does not reduce it into a mere document of social policy as the author uncovers the surplus of meaning and richness of experience invested in these environments at the historical mom <u>Universal Principles of Architecture</u> WAI Architecture Think Tank, Cruz Garcia, Nathalie Frankowski, 2023-10-31 Universal Principles of Architecture is a concise visual introduction to 100 of the most fundamental elements of architecture **Architectures of Hiding Rana** Abughannam, Émélie Desrochers-Turgeon, Pallavi Swaranjali, Federica Goffi, 2024-01-31 Architecture manifests as a space of concealment and unconcealment lethe and al their enclosure and disclosure where its making and agency are both hidden and revealed With an urgency to amplify narratives that are overlooked silenced and unacknowledged in and by architectural spaces histories and theories this book contends the need for a critical study of hiding in the context of architectural processes It urges the understanding of inherent opportunities power structures and covert strategies whether socio cultural geo political environmental or economic as they are related to their hidescapes the constructed landscapes of our built environments participating in the architectures of hiding Looking at and beyond the intentions and agency that architects possess architectural spaces lend themselves as apparatuses for various forms of hiding and un hiding The examples explored in this book and the creative works presented in the interviews enclosed in the interludes of this publication cover a broad range of geographic and cultural contexts discursively disclosing hidden aspects of architectural meaning The book

investigates the imaginative intrigue of concealing and revealing in design processes along with moral responsibilities and ethical dilemmas inherent in crafting concealment through the making and reception of architecture **Architectures of** Chance Dr Yeoryia Manolopoulou, 2013-12-11 Architectural discourse is dominated by a false dichotomy between design and chance and governed by the belief that the architect's role is to defend against the indeterminate this book challenges this position arguing for the need to develop a more creative and spatial understanding of chance as experience critical agency and a design practice in its own right Architectures of Chance makes illuminating reading for those interested in aesthetic knowledge design and its limits and the poetics and ethics of chance and space in the overlapping fields of architecture and Brain-Inspired Cognitive Architectures for Artificial Intelligence: BICA*AI 2020 Alexei V. the aleatoric arts Samsonovich, Ricardo R. Gudwin, Alexandre da Silva Simões, 2020-12-08 The book focuses on original approaches intended to support the development of biologically inspired cognitive architectures It bridges together different disciplines from classical artificial intelligence to linguistics from neuro and social sciences to design and creativity among others The chapters based on contributions presented at the Eleventh Annual Meeting of the BICA Society held on November 10 14 2020 in Natal Brazil discuss emerging methods theories and ideas towards the realization of general purpose humanlike artificial intelligence or fostering a better understanding of the ways the human mind works All in all the book provides engineers mathematicians psychologists computer scientists and other experts with a timely snapshot of recent research and a source of inspiration for future developments in the broadly intended areas of artificial intelligence and biological Building Children's Worlds Torsten Schmiedeknecht, Jill Rudd, Emma Hayward, 2023-03-28 Children are the inspiration future architects clients and users of our buildings The kinds of architectural worlds they are exposed to in picturebooks during their formative years may be assumed to influence how they regard such architecture as adults Contemporary urban environments the world over represent the various stages of modernism in architecture This book reads that history through picturebooks and considers the kinds of national identities and histories they construct Twelve specialist essays from international scholars address questions such as Is modern architecture used to construct specific narratives of childhood Is it taken to support negative narratives of alienation on the one hand and positive narratives of happiness on the other Do images of modern architecture support ideas of community Reinforce family values If so what kinds of architecture community and family How is modern architecture placed vis vis the promotion of diversity ethnic religious gender etc How might the use of architecture in comic strips or the presence of specific kinds of building in fiction aimed at younger adults be related to the groundwork laid in picturebooks for younger readers This book reveals what stories are told about modern architecture and shows how those stories affect future attitudes towards and expectations of the built environment Active and Programmable Networks for Adaptive Architectures and Services Syed Asad Hussain, 2006-12-15 Most conventional networks are passive with only basic traffic monitoring management routing and congestion control At best they can be

called reactive Deploying new functions and integrating new standards into these architectures is difficult due to the rigid embedding of software and hardware into the network components Active and Program **Emergent Neural Computational Architectures Based on Neuroscience** Stefan Wermter, Jim Austin, David Willshaw, 2003-05-15 It is generally understood that the present approachs to computing do not have the performance flexibility and reliability of biological information processing systems Although there is a comprehensive body of knowledge regarding how information processing occurs in the brain and central nervous system this has had little impact on mainstream computing so far This book presents a broad spectrum of current research into biologically inspired computational systems and thus contributes towards developing new computational approaches based on neuroscience The 39 revised full papers by leading researchers were carefully selected and reviewed for inclusion in this anthology Besides an introductory overview by the volume editors the book offers topical parts on modular organization and robustness timing and synchronization and learning and memory Functional Verification of Programmable Embedded Architectures Prabhat Mishra, Nikil D. Dutt, 2005-07 Validation of programmable architectures consisting of processor cores coprocessors and memory subsystems is one of the major bottlenecks in current System on Chip design methodology A critical challenge in validation of such systems is the lack of a golden reference model As a result many existing validation techniques employ a bottom up approach to design verification where the functionality of an existing architecture is in essence reverse engineered from its implementation Traditional validation techniques employ different reference models depending on the abstraction level and verification task resulting in potential inconsistencies between multiple reference models This book presents a top down validation methodology that complements the existing bottom up approaches It leverages the system architect's knowledge about the behavior of the design through architecture specification using an Architecture Description Language ADL The authors also address two fundamental challenges in functional verification lack of a golden reference model and lack of a comprehensive functional coverage metric Functional Verification of Programmable Embedded Architectures A Top Down Approach is designed for students researchers CAD tool developers designers and managers interested in the development of tools techniques and methodologies for system level design microprocessor validation design space exploration and functional verification of embedded systems High Performance Embedded Architectures and Compilers Yale N. Patt, Pierfrancesco Foglia, Evelyn Duesterwald, Paolo Faraboschi, Xavier Martorell, 2010-01-21 This book constitutes the refereed proceedings of the 5th International Conference on High Performance Embedded Architectures and Compilers HiPEAC 2010 held in Pisa Italy in January 2010 The 23 revised full papers presented together with the abstracts of 2 invited keynote addresses were carefully reviewed and selected from 94 submissions The papers are organized in topical sections on architectural support for concurrency compilation and runtime systems reconfigurable and customized architectures multicore efficiency reliability and power memory organization and optimization and programming and analysis of accelerators
