Deep In-memory Architectures for Machine Learning Mingu Kang, Sujan Gonugondla, Naresh R. Shanbhag, 2020-01-30
This book describes the recent innovation of deep in memory architectures for realizing AI systems that operate at the edge of energy latency accuracy trade offs From first principles to lab prototypes this book provides a comprehensive view of this emerging topic for both the practicing engineer in industry and the researcher in academia The book is a journey into the exciting world of AI systems in hardware *Pattern Recognition: Architectures, Algorithms And Applications* Rejean Plamondon, Heng-da Cheng, 1991-08-12 This book contains 15 reviewed papers selected from among those presented at the 4th Vision Interface Conference in Halifax Canada 14 18 May 1990 The papers are grouped into three sections which deal with parallel architectures and neural networks algorithms for analysis and processing and systems and applications

Domain-Specific Computer Architectures for Emerging Applications Chao Wang, 2024-06-04 With the end of Moore's Law domain specific architecture DSA has become a crucial mode of implementing future computing architectures This book discusses the system level design methodology of DSAs and their applications providing a unified design process that guarantees functionality performance energy efficiency and real time responsiveness for the target application DSAs often start from domain specific algorithms or applications analyzing the characteristics of algorithmic applications such as computation memory access and communication and proposing the heterogeneous accelerator architecture suitable for that particular application This book places particular focus on accelerator hardware platforms and distributed systems for various novel applications such as machine learning data mining neural networks and graph algorithms and also covers RISC V open source instruction sets It briefly describes the system design methodology based on DSAs and presents the latest research results in academia around domain specific acceleration architectures Providing cutting edge discussion of big data and artificial intelligence scenarios in contemporary industry and typical DSA applications this book appeals to industry professionals as well as academicians researching the future of computing in these areas **Documenting Software**

Architectures Paul Clements, Felix Bachmann, Len Bass, David Garlan, James Ivers, Reed Little, Paulo Merson, Robert Nord, Judith Stafford, 2010-10-05 Software architecture the conceptual glue that holds every phase of a project together for its many stakeholders is widely recognized as a critical element in modern software development Practitioners have increasingly discovered that close attention to a software system's architecture pays valuable dividends Without an architecture that is appropriate for the problem being solved a project will stumble along or most likely fail Even with a superb architecture if that architecture is not well understood or well communicated the project is unlikely to succeed Documenting Software Architectures Second Edition provides the most complete and current guidance independent of language or notation on how to capture an architecture in a commonly understandable form Drawing on their extensive experience the authors first help you decide what information to document and then with guidelines and examples in various

notations including UML show you how to express an architecture so that others can successfully build use and maintain a system from it The book features rules for sound documentation the goals and strategies of documentation architectural views and styles documentation for software interfaces and software behavior and templates for capturing and organizing information to generate a coherent package New and improved in this second edition Coverage of architectural styles such as service oriented architectures multi tier architectures and data models Guidance for documentation in an Agile development environment Deeper treatment of documentation of rationale reflecting best industrial practices Improved templates reflecting years of use and feedback and more documentation layout options A new comprehensive example available online featuring documentation of a Web based service oriented system Reference guides for three important architecture documentation languages UML AADL and SySML

Architectures of Poetry, 2021-09-06 Architectures of Poetry is the first comprehensive accounting of the currently intense dialogue between the sister arts of poetry and architecture Refusing to take either term in a metaphoric sense the eleven essays collected in this volume exemplify an exciting methodological direction for work in the humanities a literal wager that is willing to take the unintended suggestions of language as reality At the same time they also provide close readings of the work of a number of important writers In addition to a suite of essays devoted to the team of Arakawa and Madeline Gins chapters focus on figures as diverse as Francesco Borromini Rainer Maria Rilke St phane Mallarm Friedrich Achleitner John Cage and Lyn Hejinian

Electronic Devices Architectures for the NANO-CMOS Era Simon Deleonibus, 2009 This book gives a state of the art overview by internationally recognized researchers of the electronic device architectures required for the NanoCMOS era and beyond Challenges relevant to the scaling of CMOS Nanoelectronics are addressed through the different Core CMOS and Memory Devices options in the first part of the book The second part reviews the New device Concepts for Nanoelectronics Beyond CMOS What are the fundamental limits of core CMOS and can we improve the scaling by the introduction of new materials or processes Will the new architectures using SOI multigates or multichannels improve the trade off between performance and power consumption and relax the constraints of new material integration Can quantum computing replace binary based protocols to enhance the information processing power These questions and others are answered in this book

Functional Verification of Programmable Embedded Architectures Prabhat Mishra, Nikil D. Dutt, 2005-12-06 It is widely acknowledged that the cost of validation and testing comprises a significant percentage of the overall development costs for electronic systems today and is expected to escalate sharply in the future Many studies have shown that up to 70% of the design development time and resources are spent on functional verification Functional errors manifest themselves very early in the design flow and unless they are detected up front they can result in severe consequence both financially and from a safety viewpoint Indeed several recent instances of high profile functional errors e.g the Pentium FDIV bug have resulted in increased attention paid to verifying the functional correctness of designs Recent efforts have proposed augmenting the traditional RTL simulation based validation methodology with formal techniques in an attempt to uncover hard to find corner cases with the goal of trying to reach RTL functional verification closure However what is often not highlighted is the fact that in spite of the tremendous time and effort put into such efforts at the RTL and lower levels of abstraction the complexity of contemporary embedded systems makes it difficult to guarantee functional correctness at the system level under all possible operational scenarios The problem is exacerbated in current System on Chip SOC design methodologies that employ Intellectual Property IP blocks composed of processor cores coprocessors and memory subsystems Functional verification becomes one of the major bottlenecks in the design of such systems
