The Baroque in Architectural Culture, 1880-1980 Andrew Leach, John Macarthur, 2016-03-09 In his landmark volume *Space Time and Architecture* Sigfried Giedion paired images of two iconic spirals Tatlin's Monument to the Third International and Borromini's dome for Sant Ivo alla Sapienza The values shared between the baroque age and the modern were thus encapsulated on a single page spread As Giedion put it writing of Sant Ivo Borromini accomplished the movement of the whole pattern from the ground to the lantern without entirely ending even there And yet he merely groped towards that which could be completely effected in modern architecture achieving the transition between inner and outer space The intellectual debt of modern architecture to modernist historians who were ostensibly preoccupied with the art and architecture of earlier epochs is now widely acknowledged This volume extends this work by contributing to the dual projects of the intellectual history of modern architecture and the history of architectural historiography It considers the varied ways that historians of art and architecture have historicized modern architecture through its interaction with the baroque a term of contested historical and conceptual significance that has often seemed to shadow a greater contest over the historicity of modernism Presenting research by an international community of scholars this book explores through a series of cross sections the traffic of ideas between practice and history that has shaped modern architecture and the academic discipline of architectural history across the long twentieth century The editors use the historiography of the baroque as a lens through which to follow the path of modern ideas that draw authority from history In doing so the volume defines a role for the baroque in the history of architectural historiography and in the history of modern architectural culture **The Ocean as a Creative Experience** Juergen Claus, 2023-03-31 This book by artist diver and editor in chief of an underwater magazine Juergen Claus is a milestone among the books dedicated to the planet sea It is a knowledge rich overview created from facts and experiences of three main themes that have never been described in context Marine architectures from both the Pacific and Atlantic regions have now moved from vision to reality Whether it is a sail shaped architecture in Noumea or a whale shaped

one in the Arctic region Special attention is paid by Prof Claus to post disaster architecture The book will encourage young readers to design metabolic buildings themselves That the seascape has also become a fluid studio for visual artists may come as a surprise The works of art some of which the author has experienced first hand have intertwined with an ecological sustainable way of working And this is also true to a special degree for the sound artists They realize their sonic worlds with recordings from the sounding world underwater a concert hall of hitherto unknown dimensions The author s experience as a professor of media art with students flows into the description of multimedia or media related ocean installations Here the book becomes a stimulus for realizing one s own experiences *Service-Oriented and Cloud Computing* Flavio De Paoli, Ernesto Pimentel, Gianluigi Zavattaro, 2012-08-23 This book constitutes the refereed proceedings of the First European Conference on Service Oriented and Cloud Computing ESOC held in Bertinoro Italy in September 2012 The 12 full papers 3 short papers and 3 poster papers were carefully reviewed and selected from 57 submissions The volume also contains 7 papers from the industrial track The papers cover the following topics cloud computing service quality and analysis service composition and evolution composition security modeling adaption 1987 European Conference on Architecture Wolfgang Palz, 1987
