Architecture In Helsinki Wiki:

Biomimetic Architecture and Its Role in Developing Sustainable, Regenerative, and Livable Cities Mohsen Aboulnaga, Samaa E. Helmy, 2022-09-01 This book focuses on understanding biomimetic architecture and its role as a sustainable design tool. It presents the role of biomimicry in mitigation and adaptation to climate change and examines how biomimetic architecture can provide healthy solutions to limit the spread of COVID 19 in buildings and cities. Coverage includes global examples of biomimetic approaches and buildings, an evaluation of the performance of biomimicry applications in architecture to illustrate best practices, and an exploration of how nature can offer inspiration in building design to conserve resources and save energy use as well as curb carbon emissions, a reaffirmed goal of COP 26 and an outcome of Glasgow Climate Pact. Finally, the book presents guidelines to enhance urban areas and healthier spaces in buildings to meet COVID 19 social distance regulations and beyond. Examines global applications of biomimicry in architecture. Highlights the importance of biomimicry in driving livability in cities and buildings. Explores the role of biomimetic architecture in mitigating climate change. The line of argument developed is highly relevant to the present in addition to being original and pertinent to research on urban regeneration, especially in regard to the exploration of the use of biomimicry architecture in response to changing urban demands. Alessandra Battisti, Ph.D., Professor of Architecture, University of Rome La Sapienza. *Knowledge Building in Landscape Architecture* Fetzer, Ellen, 2014 Schlagworte e learning landscape architecture education pedagogic **how architecture can save the world from global climate change** Tommy Vince, 2021-12-09 Is finding your house sinking into the ground the next big thing within sustainable architecture? Well, if you find the arguments of this project strong enough, it might actually be a common sight in the near future. The field of architecture needs to respond to the IPCC's call for action for methods of CO₂ sequestration to help antagonize the developing global climate change. How architecture can save the world from global climate change is a bold project that responds to that call, proposing an architecture that both sequesters its embodied CO₂ mass and does so within a targeted time frame of a generation. Ultimately gifting society and its protagonists with a possibility of producing a truthfully net positive CO₂ reductive footprint. It succeeds in doing so by drawing knowledge from a local history of sinking Nordic timber log architecture and combining it with the theory of sequestration. Performed as projected, this pioneering project might just be the world's most sustainable architecture ever designed. How architecture can save the world from global climate change is for anyone with an architectural fascination longing for a deeply illustrated and detailed read of sustainable architecture and Nordic timber log design. In a comprehensive way, it weaves architectural poetry together with hard data, science, construction details, and ideological ambitions in a convincing argument for the benefit of society's bettered relationship to climate. In conclusion, this book is more than just a coffee book; a blend of a scientific report, it is a piece of art challenging the basic perception of what an architectural book can be. An intensely original and highly
