3 Stochastic Integrals

Exercise 3.1

(a) Since $Z(t)$ is deterministic, we have

$$\begin{aligned}dZ(t) &= \alpha e^{\alpha t} dt \\ &= \alpha Z(t) dt.\end{aligned}$$

(b) By definition of a stochastic differential

$$dZ(t) = g(t)dW(t)$$

(c) Using Itô's formula

$$\begin{aligned}dZ(t) &= \frac{\alpha^2}{2} e^{\alpha W(t)} dt + \alpha e^{\alpha W(t)} dW(t) \\ &= \frac{\alpha^2}{2} Z(t) dt + \alpha Z(t) dW(t)\end{aligned}$$

(d) Using Itô's formula and considering the dynamics of $X(t)$ we have

$$\begin{aligned}dZ(t) &= \alpha e^{\alpha X} dX(t) + \frac{\alpha^2}{2} e^{\alpha X} (dX(t))^2 \\ &= Z(t) \left[\alpha \mu + \frac{1}{2} \alpha^2 \sigma^2 \right] dt + \alpha \sigma Z(t) dW(t).\end{aligned}$$

(e) Using Itô's formula and considering the dynamics of $X(t)$ we have

$$\begin{aligned}dZ(t) &= 2X(t)dX(t) + (dX(t))^2 \\ &= Z(t) [2\alpha + \sigma^2] dt + 2Z\sigma dW(t).\end{aligned}$$

Exercise 3.3 By definition we have that the dynamics of $X(t)$ are given by $dX(t) = \sigma(t)dW(t)$.

Consider $Z(t) = e^{\alpha X(t)}$. Then using the Itô's formula we have that the dynamic of $Z(t)$ can be described by

$$dZ(t) = \left[-\frac{\alpha^2}{2} \sigma^2(t) \right] Z(t) dt + [\alpha \sigma(t)] Z(t) dW(t)$$

Arbitrage Theory In Continuous Time Solutions Manual:

Arbitrage Theory in Continuous Time Tomas Björk, 1998-09 This text provides an accessible introduction to the classical mathematical underpinnings of modern finance Professor Bjork concentrates on the probabilistic theory of continuous arbitrage pricing of financial derivatives

Arbitrage Theory in Continuous Time Tomas Bjork, 2020-01-16 The fourth edition of this widely used textbook on pricing and hedging of financial derivatives now also includes dynamic equilibrium theory and continues to combine sound mathematical principles with economic applications Concentrating on the probabilistic theory of continuous time arbitrage pricing of financial derivatives including stochastic optimal control theory and optimal stopping theory Arbitrage Theory in Continuous Time is designed for graduate students in economics and mathematics and combines the necessary mathematical background with a solid economic focus It includes a solved example for every new technique presented contains numerous exercises and suggests further reading in each chapter All concepts and ideas are discussed not only from a mathematics point of view but with lots of intuitive economic arguments In the substantially extended fourth edition Tomas Bjork has added completely new chapters on incomplete markets treating such topics as the Esscher transform the minimal martingale measure $\mathbb{Q}$ divergences optimal investment theory for incomplete markets and good deal bounds This edition includes an entirely new section presenting dynamic equilibrium theory covering unit net supply endowments models and the Cox Ingersoll Ross equilibrium factor model Providing two full treatments of arbitrage theory the classical delta hedging approach and the modern martingale approach this book is written so that these approaches can be studied independently of each other thus providing the less mathematically oriented reader with a self contained introduction to arbitrage theory and equilibrium theory while at the same time allowing the more advanced student to see the full theory in action This textbook is a natural choice for graduate students and advanced undergraduates studying finance and an invaluable introduction to mathematical finance for mathematicians and professionals in the market

Problems and Solutions in Mathematical Finance, Volume 1 Eric Chin, Sverrir Iafsson, Dian Nel, 2014-11-10

Mathematical finance requires the use of advanced mathematical techniques drawn from the theory of probability stochastic processes and stochastic differential equations These areas are generally introduced and developed at an abstract level making it problematic when applying these techniques to practical issues in finance Problems and Solutions in Mathematical Finance Volume I Stochastic Calculus is the first of a four volume set of books focusing on problems and solutions in mathematical finance This volume introduces the reader to the basic stochastic calculus concepts required for the study of this important subject providing a large number of worked examples which enable the reader to build the necessary foundation for more practical orientated problems in the later volumes Through this application and by working through the numerous examples the reader will properly understand and appreciate the fundamentals that underpin mathematical finance Written mainly for students industry practitioners and those involved in teaching in this field of study Stochastic

Calculus provides a valuable reference book to complement one's further understanding of mathematical finance Applied Intertemporal Optimization Klaus Wälde, 2012 Brownian Motion Calculus Ubbo F. Wiersema, 2008-08-06 Brownian Motion Calculus presents the basics of Stochastic Calculus with a focus on the valuation of financial derivatives. It is intended as an accessible introduction to the technical literature. A clear distinction has been made between the mathematics that is convenient for a first introduction and the more rigorous underpinnings which are best studied from the selected technical references. The inclusion of fully worked out exercises makes the book attractive for self study. Standard probability theory and ordinary calculus are the prerequisites. Summary slides for revision and teaching can be found on the book website.

Continuous-Time Asset Pricing Theory Robert A. Jarrow, 2021-07-30 Asset pricing theory yields deep insights into crucial market phenomena such as stock market bubbles. Now in a newly revised and updated edition, this textbook guides the reader through this theory and its applications to markets. The new edition features new results on state dependent preferences, a characterization of market efficiency, and a more general presentation of multiple factor models using only the assumptions of no arbitrage and no dominance. Taking an innovative approach based on martingales, the book presents advanced techniques of mathematical finance in a business and economics context, covering a range of relevant topics such as derivatives pricing and hedging, systematic risk, portfolio optimization, market efficiency, and equilibrium pricing models. For applications to high dimensional statistics and machine learning, new multi factor models are given. This new edition integrates suicide trading strategies into the understanding of asset price bubbles, greatly enriching the overall presentation and further strengthening the book's underlying theme of economic bubbles. Written by a leading expert in risk management, Continuous Time Asset Pricing Theory is the first textbook on asset pricing theory with a martingale approach. Based on the author's extensive teaching and research experience on the topic, it is particularly well suited for graduate students in business and economics with a strong mathematical background.
