Primate Behavioral Ecology Karen B. Strier, 2015-07-22 *Primate Behavioral Ecology* described as an engaging cutting edge exposition incorporates exciting new discoveries and the most up to date approaches in its introduction to the field and its applications of behavioral ecology to primate conservation This unique comprehensive single authored text integrates the basics of evolutionary ecological and demographic perspectives with contemporary noninvasive molecular and hormonal techniques to understand how different primates behave and the significance of these insights for primate conservation Examples are drawn from the classic primate field studies and more recent studies on previously neglected species from across the primate order illustrating the vast behavioral variation that we now know exists and the gaps in our knowledge that future studies will fill The Sons of Pigs and Apes Neil J. Kressel, 2012 The frightening resurgence of antisemitism in the Muslim world Hear Me Roar Erna Walraven, 2025-04-29 In the early 1980s when Erna Walraven decided to follow her dreams and become one of the first female zookeepers in Australia she thought her biggest challenges would be feeding big cats and subduing irate gorillas In fact it was her male colleagues who made work miserable harassing and humiliating her for doing a man's job So she looked to the animals under her care to prove them wrong Despite what Erna's colleagues seemed to think the females of the animal world were far from weak and demure Elephant matriarchs led their herds female bonobos revelled in sexual exploration emu mothers abandoned their chicks to the care of their fathers Her colleagues wouldn't dare tell a female tiger that hunting was a male's job why were they so intent on limiting Erna In this insightful and delightful book Erna blends memoir and pop science to tell a fiercely female story She recounts a life spent caring for animals in a fast transforming industry and dives into scientific evidence and evolutionary history to debunk the myths that once held her back **Governing for Revolution** Megan Stewart, 2021-03-18 For some rebel groups governance is not always part of a military strategy but a necessary element of realizing revolution through civil war Mathematical and Algorithmic Puzzles Pramod Ganapathi, 2024-05-29 This book presents serious mathematical and algorithmic puzzles that are mostly counterintuitive The presented puzzles are simultaneously entertaining challenging intriguing and haunting This book introduces its readers to counterintuitive mathematical ideas and revolutionary algorithmic insights from a wide variety of topics The presented solutions that are discovered by many mathematicians and computer scientists are highly counterintuitive and show supreme mathematical beauty These counterintuitive solutions are intriguing to the degree that they shatter our preconceived notions shake our long held belief systems debunk our fundamental intuitions and finally rob us of sleep and haunt us for a lifetime Multiple ways of attacking the same puzzle are presented which teach the application of elegant problem solving strategies In Fraud We Trust Wes Henricksen, 2024-11-15 Telling lies and falling for them is one of the things that makes us human The vast majority of these falsehoods are harmless and perfectly legal But when someone deceives another for material gain or profit inflicting injury in the process we give this kind of lie a special label

fraud Most people are familiar with the concept and understand that fraud is prohibited by law What many fail to appreciate however is that the law does not treat all frauds equally If you defraud an individual you might end up in prison On the other hand if you defraud millions of people what Wes Henricksen calls fraud on the public you might end up wealthy or powerful or even get elected president In a perverse sense the bigger the fraud the more likely it is protected by the First Amendment and therefore legal As a result many of the largest and most destructive fraud schemes are allowed encouraged and richly rewarded Examples of fraud on the public are everywhere The fossil fuel industry long used PR firms and lobbyists to spread disinformation about oil s role in climate change Sugar companies misled the public about the dangers of high fructose corn syrup redirecting the public s attention to fat Cigarette manufacturers famously lied about the risks of tobacco and opioid makers lied about the effects of the drug Social media influencers and fringe media outlets promoted false claims about the COVID 19 pandemic being a government hoax Others claimed that vaccines were part of a sinister plot Politicians on both sides of the aisle lie with such regularity that people have become deeply cynical about whether to believe anything they say Henricksen shows that large scale fraud is carried out for many reasons beyond financial profit including political gain the prevention of justice and the falsification of history In addition to exposing the depths of the problem Henricksen gives readers a way forward He proposes we call these massive deceit campaigns by their proper name that we de weaponize the First Amendment which was never meant to shield swindlers and that we enact new laws that protect the public from fraud By revealing for the first time the root legal cause of the misinformation crisis and presenting novel solutions In *Fraud We Trust* speaks to the present moment as it offers answers for the future

Psychology and Mathematics Education Gila Hanna, Laura Macchi, Karin Binder, Laura Martignon, Katharina Loibl, 2023-09-05 Modern Mathematics is constructed rigorously through proofs based on truths which are either axioms or previously proven theorems Thus it is par excellence a model of rational inquiry Links between Cognitive Psychology and Mathematics Education have been particularly strong during the last decades Indeed the Enlightenment view of the rational human mind that reasons makes decisions and solves problems based on logic and probabilities was shaken during the second half of the twentieth century Cognitive psychologists discovered that humans thoughts and actions often deviate from rules imposed by strict normative theories of inference Yet these deviations should not be called errors as Cognitive Psychologists have demonstrated these deviations may be either valid heuristics that succeed in the environments in which humans have evolved or biases that are caused by a lack of adaptation to abstract information formats Humans as the cognitive psychologist and economist Herbert Simon claimed do

not usually optimize but rather satisfy even when solving problem This Research Topic aims at demonstrating that these insights have had a decisive impact on Mathematics Education We want to stress that we are concerned with the view of bounded rationality that is different from the one espoused by the heuristics and biases program In Simon's bounded rationality and its direct descendant ecological rationality rationality is understood in terms of cognitive success in the world correspondence rather than in terms of conformity to content free norms of coherence e.g. transitivity

The Genesis of Israel and Egypt Emmet Sweeney, 2023-10-01 The Genesis of Israel and Egypt examines the earliest phase of historical consciousness in the ancient Near East looking in particular at the mysterious origins of Egypt's civilization and its links with Mesopotamia and the early Hebrews. The book takes a radically alternative view of the rise of high civilization in the Near East and the forces which propelled it. The author Emmet Sweeney finds that the early civilizations developed amidst a background of massive and repeated natural catastrophes, events which had a profound effect upon the ancient peoples and left its mark upon their myths, legends, customs, and religions. Ideas found in all corners of the globe, concepts such as dragon worship, pyramid building, and human sacrifice are shown by Sweeney to have a common origin in the cataclysmic events of the period termed the eruptive age by legendary English explorer Percy Fawcett. Terrified and traumatized by the forces of nature, people all over the world began to keep an obsessive watch on the heavens and to offer blood sacrifices to the angry sky gods. These events, which are fundamental to any understanding of the first literate cultures, have nonetheless been completely effaced from the history books and an official history of mankind which is little more than an elaborate fiction now graces the bookshelves of the world's great libraries. Starting with clues unearthed by history sleuth Immanuel Velikovsky and others, Emmet Sweeney takes the investigation further. While the Near Eastern civilizations are generally considered to have taken shape around 3300 BC, about 2,000 years before those of China and the New World, Ages in Alignment demonstrates that they had no 2,000-year head start. All the ancient civilizations arose simultaneously around 1300 BC in the wake of a terrible natural catastrophe recalled in legend as the Flood or Deluge. Sweeney points out that the presently accepted chronology of Egypt is not based on science but on venerated literary tradition. This chronology had already been established in its present form by the third century BC when Jewish historians, utilizing the History of Egypt by the Hellenistic author Manetho, sought to tie in Egypt's history with that of the Bible. Apparent gaps and weird repetitions resulted. Improbable feats like the construction of major cut-stone engineering projects before the advent of steel tools or Pythagorean geometry point to the weaknesses of the traditional view. Taking a more rigorous approach and pointing to solid evidence, Emmet Sweeney shows where names overlap and where one and the same group is mistaken for different peoples in different times.

Volume 1: The Genesis of Israel and Egypt looks at the archaeological evidence for the Flood, evidence now misinterpreted and ignored. This volume examines the rise of the first literate cultures in the wake of the catastrophe and goes on to trace the story of the great migration which led groups of early Mesopotamians westward toward Egypt where they helped to establish Egyptian civilization. This migration, recalled in the biblical story of Abraham, provides the first link between Egyptian and Hebrew histories. The next link comes a few

generations later with Imhotep the great seer who solved the crisis of a seven year famine by interpreting pharaoh Djoser's dream Imhotep is shown to be the same person as Joseph son of Jacob

Science Fraud: Darwin's Plagiarism of Patrick Matthew's Theory Mike Sutton,2023 Patrick Matthew in 1831 originated the complete theory of evolution by natural selection in his book On Naval Timber and Arboriculture and did so before Charles Darwin and Alfred Wallace claimed to independently replicate it in 1858 Unjustly and against the Arago convention on priority a ruling that gives origination of any science theory to the first to publish Matthew has been illicitly denied his

priority on the grounds he never influenced anyone with his breakthrough Today Big Data research has uncovered Darwin's science fraud by plagiarism revealing evidence which proves beyond all reasonable doubt that he and Alfred Wallace both independently plagiarised the theory of evolution by natural selection from Patrick Matthew Books have been newly unearthed in the publication record to show that at least 30 people cited Matthew's work in published literature before 1858 and that several were known influencers of Darwin's and Wallace's work in the field Additionally several people in Darwin's and Wallace's social circles were first to be second into print using original terms coined by Matthew in his bombshell breakthrough book This book reveals all the newly unearthed data and essentially explains it alongside the deplorable treatment of Patrick Matthew in scholarly historical context Dr Mike Sutton further reveals using social science participatory observation methods and experimental results how members of the so called Darwin Industry enabled and facilitated by the deliberate publication of falsehoods and other grossly misleading editing on Wikipedia have disgracefully worked to re bury these newly unearthed facts by means of knee jerk blind sight ignorant rejection blatant and deliberate fact denial censorship persistent and serious workplace harassment obscene social media abuse poison pen emails lies mischievous misrepresentation and repeat research plagiarism
