Red City is the dark and deadly adult debut from the bestselling author of the iconic Legend series and perfect for fans of V.E. Schwab. Alchemy is the hidden art of transformation, an exclusive power wielded by crime syndicates who market it to the world's elite in the form of sand, a drug that enhances those who take it into a more perfect version of themselves: more beautiful, more charismatic, simply more. Among the gleaming skyscrapers and rolling foothills of Angel City, alchemy is controlled by two rival syndicates. For years, Grand Central and Lumines have been balanced on a razor's edge between polite negotiation and outright violence. But when two childhood friends step into that delicate equation, the city and the paths of their lives will be irrevocably transformed. The daughter of a poor single mother, Sam would do anything to claw her way into the ranks of Grand Central in search of a better life. Plucked away from his family as a boy to become a Lumines apprentice, Ari is one of the syndicates' brightest rising stars. Once they might have loved each other, but as the two alchemists face off from opposite sides of an ever escalating conflict, ambition becomes power, loyalty becomes lies, and no transformation may be perfect enough for them both to survive the coming war. Praise for Marie Lu: Marie Lu always delivers. Leigh Bardugo, author of Ninth House and Six of Crows. Marie Lu is magic. Tahereh Mafi, author of Shatter Me. The focus is on how the systems of reason that govern schooling embody historically generated rules and standards about what is talked about, thought and acted on about the nature of children, about the practices and paradoxes of educational reform. These systems of reason are examined to consider issues of power, the political and social exclusion. The transnational perspectives interrelate historical and

ethnographic studies of the modern school to explore how curriculum is translated through social and cognitive psychologies that make up the subjects of schooling and how educational sciences act to order and divide what is deemed possible to think and do The central argument is that taken for granted notions of educational change and research paradoxically produce differences that simultaneously include and exclude *Catalog of Copyright Entries.
