A plausible explanation is that increasing numbers of stakeholders are demanding responsibility from corporations. Hyper transparency of corporate activities fueled by disclosure laws and the Internet has increased awareness to the point where corporate behavior is under constant scrutiny. Smart business leaders are aware of this scrutiny and of the high costs of a public scandal. They know that in the long run it is cheaper to act responsibly now than to dig out from a PR disaster later.

Tim Mohin is a veteran corporate responsibility practitioner who has led programs at Apple, Intel and AMD. In this book, Tim tells us why he believes he is making a difference where it counts and how others can do the same. His book is a manual on how to steer the corporate supertanker toward doing good for people and our planet. *Changing Business from the Inside Out* provides a fascinating roadmap to the corporate responsibility and sustainability field from beginning a career to forming a program to navigating the complicated politics of a corporation. Mohin likens the corporate treehugger role to being the designated driver at the corporate cocktail party. Throughout his book, he argues strongly that activists can accomplish more for the planet and society by serving as a voice of responsibility within the corporation rather than protesting outside the factory gates. Corporations are clearly the drivers of the world economy and the corporate responsibility practitioner has an essential role in bringing ethical and sustainable values to the C suite and making sure that they are accomplished. Whether you are a practitioner needing advice, a mid-career professional wanting to change course or an MBA wondering how to incorporate responsibility into your career, this book has the answers you need. Deepthi, 2025-01-06. The book *Industry 4.0 A Sustainable Industrial Approach* explores the intersection between cutting-edge technologies and sustainable industrial practices. It highlights how Industry 4.0, the current wave of digital transformation, integrates technologies like the Internet of Things (IoT), Artificial Intelligence (AI), Big Data Analytics, and Cyber Physical Systems (CPS) into traditional manufacturing. These innovations form the foundation of what is known as the smart factory.
