Compression and Communication Feng Wu, 2014-07-25 Visual information is one of the richest and most bandwidth consuming modes of communication To meet the requirements of emerging applications powerful data compression and transmission techniques are required to achieve highly efficient communication even in the presence of growing communication channels that offer increased bandwidth Presenting the results of the author's years of research on visual data compression and transmission Advances in Visual Data Compression and Communication Meeting the Requirements of New Applications provides a theoretical and technical basis for advanced research on visual data compression and communication The book studies the drifting problem in scalable video coding analyzes the reasons causing the problem and proposes various solutions to the problem It explores the author's Barbell based lifting coding scheme that has been adopted as common software by MPEG It also proposes a unified framework for deriving a directional transform from the nondirectional counterpart The structure of the framework and the statistic distribution of coefficients are similar to those of the nondirectional transforms which facilitates subsequent entropy coding Exploring the visual correlation that exists in media the text extends the current coding framework from different aspects including advanced image synthesis from description and reconstruction to organizing correlated images as a pseudo sequence It explains how to apply compressive sensing to solve the data compression problem during transmission and covers novel research on compressive sensor data gathering random projection codes and compressive modulation For analog and digital transmission technologies the book develops the pseudo analog transmission for media and explores cutting edge research on distributed pseudo analog transmission denoising in pseudo analog transmission and supporting MIMO It concludes by considering emerging developments of information theory for future applications **Multidimensional Signal, Image, and Video Processing and Coding** John W. Woods, 2011-05-31 Multidimensional Signal Image and Video Processing and Coding gives a concise introduction to both image and video processing providing a balanced coverage between theory applications and standards It

gives an introduction to both 2 D and 3 D signal processing theory supported by an introduction to random processes and some essential results from information theory providing the necessary foundation for a full understanding of the image and video processing concepts that follow A significant new feature is the explanation of practical network coding methods for image and video transmission There is also coverage of new approaches such as super resolution methods non local processing and directional transforms Multidimensional Signal Image and Video Processing and Coding also has on line support that contains many short MATLAB programs that complement examples and exercises on multidimensional signal image and video processing There are numerous short video clips showing applications in video processing and coding plus a copy of the vidview video player for playing yuv video files on a Windows PC and an illustration of the effect of packet loss on H 264 AVC coded bitstreams New to this edition New appendices on random processes information theory New coverage of image analysis edge detection linking clustering and segmentation Expanded coverage on image sensing and perception including color spaces Now summarizes the new MPEG coding standards scalable video coding SVC and multiview video coding MVC in addition to coverage of H 264 AVC Updated video processing material including new example on scalable video coding and more material on object and region based video coding More on video coding for networks including practical network coding PNC highlighting the significant advantages of PNC for both video downloading and streaming New coverage of super resolution methods for image and video Only R D level tutorial that gives an integrated treatment of image and video processing topics that are interconnected New chapters on introductory random processes information theory and image enhancement and analysis Coverage and discussion of the latest standards in video coding H 264 AVC and the new scalable video standard SVC

Statistical Learning and Pattern Analysis for Image and Video Processing Nanning Zheng, Jianru Xue, 2009-07-25 Why are We Writing This Book Visual data graphical image video and visualized data affect every aspect of modern society The cheap collection storage and transmission of vast amounts of visual data have revolutionized the practice of science technology and business Innovations from various disciplines have been developed and applied to the task of designing intelligent machines that can automatically detect and exploit useful regularities patterns in visual data One such approach to machine intelligence is statistical learning and pattern analysis for visual data Over the past two decades rapid advances have been made throughout the field of visual pattern analysis Some fundamental problems including perceptual grouping image segmentation stereo matching object detection and recognition and

tion analysis and visual tracking have become hot research topics and test beds in multiple areas of specialization including mathematics neuron biometry and cognition A great diversity of models and algorithms stemming from these disciplines has been proposed To address the issues of ill posed problems and uncertainties in visual pattern modeling and computing researchers have developed rich toolkits based on pattern analysis theory harmonic analysis and partial differential equations geometry and group theory graph matching and graph grammars Among these technologies involved in intelligent visual information processing statistical learning and pattern analysis is undoubtedly the most popular and important approach and it is also one of the most rapidly developing fields with many achievements in recent years Above all it provides a unifying theoretical framework for intelligent visual information processing applications **Image Databases** Vittorio

Castelli, Lawrence D. Bergman, 2004-03-24 The explosive growth of multimedia data transmission has generated a critical need for efficient high capacity image databases as well as powerful search engines to retrieve image data from them This book brings together contributions by an international all star team of innovators in the field who share their insights into all key aspects of image database and search engine construction Readers get in depth discussions of the entire range of crucial image database architecture indexing and retrieval transmission display and user interface issues And using examples from an array of disciplines the authors present cutting edge applications in medical imagery multimedia communications earth science remote sensing and other major application areas **Code of Federal Regulations** United States.
