Emerging Automotive Battery Chemistries Bart Kolodziejczyk,2023-04-12 There is an urgent need to decarbonize various industry sectors including transportation however this is difficult to achieve when relying solely on today s lithium ion Li ion battery technology A lack of sufficient supply of critical materials including lithium nickel and cobalt is a major driving force behind research development and commercialization of new battery chemistries that can support this energy transition Many emerging chemistries do not face the same supply safety and often durability challenges associated with Li ion technology yet these solutions are still very immature and require significant development effort to be commercialized Emerging Automotive Battery Chemistries Hedging Market identifies and evaluates various chemistries suitable for deployment in the automotive industry and describes advantages disadvantages and development challenges for each identified technology Additionally it outlines development timelines contending that to benefit from these new technologies in a decade or so commercialization needs to begin today e g de risking critical material supply chains developing circular approaches The report also proposes policy interventions to enable developments of these new chemistries and to allow those immature technologies to compete with well established Li ion batteries Click here to access the full SAE EDGETM Research Report portfolio <https://doi.org/10.4271/EPR2023008>

Interfacial Mechanics Jane Wang,Dong Zhu,2019-12-06 Understanding the characteristics of material contact and lubrication at tribological interfaces is of great importance to engineering researchers and machine designers Traditionally contact and lubrication are separately studied due to technical difficulties although they often coexist in reality and they are actually on the same physical ground Fast research advancements in recent years have enabled the development and application of unified models and numerical approaches to simulate contact and lubrication merging their studies into the domain of Interfacial Mechanics This book

provides updated information based on recent research progresses in related areas which includes new concepts theories methods and results for contact and lubrication problems involving elastic or inelastic materials homogeneous or inhomogeneous contacting bodies using stochastic or deterministic models for dealing with rough surfaces It also contains unified models and numerical methods for mixed lubrication studies analyses of interfacial frictional and thermal behaviors as well as theories for studying the effects of multiple fields on interfacial characteristics The book intends to reflect the recent trends of research by focusing on numerical simulation and problem solving techniques for practical interfaces of engineered surfaces and materials This book is written primarily for graduate and senior undergraduate students engineers and researchers in the fields of tribology lubrication surface engineering materials science and engineering and mechanical engineering *The ...
