ANALYSIS AND APPROACH FOR SCHEMATIC DESIGN

OF VIRTUAL WIRELESS SENSOR NETWORK Dr. Rahul Pethe, 2022-07-25 A wireless sensor network is a promising communication technique in many fields of applications but the energy constrained characteristic of sensor nodes is one of the critical issues we must consider in designing a network In each network a node is typically powered by a battery with a limited energy supply in such case cooperative broadcasting using virtualization of resources plays a significant role in saving transmission power consumption Sensor networks have limited resources and often support large scale applications that need scalable propagation of sensor data This proposed work is meant to provide the architecture for scalable and adaptive communication in large scale sensor networks also for enhancing the utility of the wireless communication Sensor Network using virtual concepts and virtual Network platforms
