Application of Adobe® Photoshop® CC 2018 for identifying color laser printer source of Xerox® brand

Ahmad Saed Salim^{1*} and Asmaa Abdel Monsef Abdalla²

Abstract

Background: In a field of digital forensic science, we have struggled to prove and keep any evidence in its most original form. The seized source of color laser printers in forgery crimes has been still an awkward issue today in digital forensic labs for identification. Till now no any scientific method has reported at all over the world that could be applied to make a success in an investigation for identifying the source of color laser printers with accuracy ratio 100%.

Method: We have explored an advanced security feature that has embedded in the color laser printouts of Xerox® brand. Adobe® Photoshop® CC 2018 has used as an indirect and nondestructive tool for our work.

Results: In this study, we could detect the hidden information (steganalysis) embedded in the color laser printouts of Xerox® brand candidate. Therefore, we could extract the clear precise machine identification code pattern corresponding to each color laser printer of Xerox® brand selected.

Conclusion: Via Adobe® Photoshop® CC 2018, we could successfully track all active security features characteristic of the color laser printers of Xerox® brand. Moreover, we could detect the identity and uniqueness of each color laser printer which had studied with an accuracy ratio reached to a hundred percent.

Since 1990, the Japan Business Machine Makers Association (JBMA) adopted a Counterfeit Protection System to decrease the counterfeiting and positively identify color laser copiers used illegally (NAFS Workshop, 2000) (Tweedy, 2001). In 2010, with a concordance between the US Secret Service and Freedom of Information Act (FOIA) and printer manufacturers (Canon, Brother, Casio, Hewlett-Packard, Konica, Minolta, Ricoh, Sharp and Xerox) agreed for commitments for identification counterfeiting crimes had committed via color laser machines. Therefore, the determination of color laser printers source seized in forgery crimes became one of the most challenges in digital forensic labs today.

In the last decade, digital forensic labs have introduced excess approaches to try catching a source of a defendant color laser printer such as, halftone analysis (Kim & Lee, 2014), statistical analysis of discrete wavelet transform (J. Choi et al., 2009) and noisy features analysis (J. H. Choi, Lee, & Lee, 2013), etc. have used. Notwithstanding, the previous methods could give good evidence but didn't reach to hundred percent in their detections. So, we have explored a new methodology for identifying the color laser printer source in a good attend enabling us to achieve an accuracy ratio hundred percent in our investigations. In our work, we have followed an active strategy for the identification. The active strategy has presented as a form of steganography for securing color laser printouts (Mace, 2010). The printer steganography consisted of embedded small microdots in their sizes, appeared in yellow color for a naked eye by zooming in with 36 X and

Responsive Web Design with Adobe Photoshop Dan Rose, 2015-01-12 For a couple of decades now designers have used Photoshop to mock up Web page designs However that work generally results in a static graphic of the page which has to be translated by a developer into the components of a Web page HTML files and Web compatible image files Our multi device world has shown us that this

approach to web design including full page comps done in Photoshop is increasingly problematic Modern web designers are adopting a new approach creating flexible web pages whose layout can adapt to suit the screen on which they are displayed This is Responsive Web Design RWD Until now books on designing responsive Web sites have focused on HTML and CSS in other words they've been very code centric and visual creativity seems to take a back seat This new book is aimed at the visual Web designer who's accustomed to working in Photoshop Adobe Photoshop CC contains many new features that help streamline the process of converting a static page design to a set of components for a responsive web page Dan Rose is one of the best known advocates of this new way of working in Photoshop He's observed that only a few people are talking about Photoshop for RWD constructively yet a majority 63% as of his last informal poll of web designers are using Photoshop for more than simple asset creation This transition is a pain point for many designers His new book will balance coverage of conceptual issues how to fit tools like Photoshop to the design workflow rather than fitting a workflow to the tools with practical design exercises tailored to help communicate the overall design direction of the page while respecting the needs of the fluid Web In addition he will introduce methods for taking HTML back into Photoshop for further refinement
