

Advance Study Assignment: Molar Mass of a Volatile Liquid

1. A student weighs an empty flask and stopper and finds the mass to be 53.256 g. She then adds about 5 mL of an unknown liquid and heats the flask in a boiling water bath at 98.8°C . After all the liquid is vaporized, she removes the flask from the bath, stoppers it, and lets it cool. After it is cool, she momentarily removes the stopper, then replaces it and weighs the flask and condensed vapor, obtaining a mass of 53.780 g. The volume of the flask is known to be 231.1 mL. The absolute atmospheric pressure in the laboratory that day is 728 mm Hg.

- a. What was the pressure of the vapor in the flask in atm?

$$P = \underline{.958} \text{ atm}$$

- b. What was the temperature of the vapor in K? the volume of the flask in liters?

$$T = \underline{371.95} \text{ K} \quad V = \underline{.2311} \text{ L}$$

- c. What was the mass of condensed vapor that was present in the flask?

$$m = \underline{53.780} \text{ grams}$$

- d. How many moles of condensed vapor were present?

$$n = \underline{\hspace{2cm}} \text{ moles}$$

- e. What is the mass of one mole of vapor (Eq. 2)?

$$MM = \underline{\hspace{2cm}} \text{ g/mole}$$

Advanced Techniques in Biophysics José Luis R. Arrondo, Alicia Alonso, 2007-04-21 Technical advancements are basic elements in our life In biophysical studies new applications and improvements in well established techniques are being implemented every day This book deals with advancements produced not only from a technical point of view but also from new approaches that are being taken in the study of biophysical samples such as nanotechniques or single cell measurements This book constitutes a privileged observatory for reviewing novel applications of biophysical techniques that can help the reader enter an area where the technology is progressing quickly and where a comprehensive explanation is not always to be found Advances in Analytical Techniques and Methodology for Chemical Speciation Study Ottavia Giuffrè, Carlos

Chemical Spectroscopy and Photochemistry in the Vacuum-Ultraviolet Camille Sandorfy, Pierre Ausloos, M.B.

Robin, 2012-12-06 It is probably safe to predict that the future of chemistry is linked to the excited states of molecules and to other short lived species ions and free radicals Molecules have only one ground state but many excited states However large the scope of normal ground state chemistry might be above and beyond it lies the world of excited states each one having its own chemistry The electronic transitions leading to the excited states either discrete or continuous are examined in molecular electronic spectroscopy Electronic spectroscopy is the queen of all spectroscopies for if we have the resolution we have everything Unfortunately the chemist who is interested in the structure and reactions of larger molecules must often renounce all that information The spectra are complex and often diffuse resolution does not always help To understand such spectra he must look at whole families of molecules to some extent structural analogies help Let us call this chemical spectroscopy and handle it with care In order to understand the properties of molecules we also need theory We know that molecular problems are in principle soluble by the methods of quantum mechanics Present time quantum chemistry is able to provide a nearly accurate description of not too large molecules in their ground states It is probably again safe to predict that the future of quantum chemistry is connected with molecular excited states or generally spoken the accurate handling of the open shell problem
