Some Noteworthy Properties of the Triangle and Its Circles W. H. Bruce,2015-06-25 Excerpt from Some Noteworthy Properties of the Triangle and Its Circles 1 The triangle is the only rigid figure that is to say it is the only polygon whose sides alone determine its shape and size or whose angles determine the ratio of its sides and of all other parts 2 Every triangle has three sides three angles three altitudes three medians three interior angle bisectors three exterior angle bisectors and three perpendicular bisectors of its sides In addition to these parts of every triangle there are certain other

lines and circles dependent upon these parts and their mutual relations and the variety of their interdependencies are fascinating to the student just awakening to the beauties of the science of geometry 3 In general a triangle is determined by any three of its parts one of these parts being a length whether this length be a side an altitude the radius of any one of its numerous dependent circles or any other length About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books Find more at www.forgottenbooks.com This book is a reproduction of an important historical work Forgotten Books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy In rare cases an imperfection in the original such as a blemish or missing page may be replicated in our edition We do however repair the vast majority of imperfections successfully any imperfections that remain are intentionally left to preserve the state of such historical works
