Business critical applications such as online transaction processing financial data processing and database mining are increasingly limited by storage performance In client applications small mobile platforms are leaving little room for batteries while demanding long life out of them Therefore reducing both idle and active power consumption has become critical Additionally client storage systems are in need of significant performance improvement as well as supporting small robust form factors Ultimately client systems are optimizing for best performance power ratio as well as performance cost ratio SSDs promise to address both enterprise and client storage requirements by drastically improving performance while at the same time reducing power Inside Solid State Drives walks the reader through all the main topics related to SSDs from NAND Flash to memory controller hardware and software from I O interfaces PCIe SAS SATA to reliability from error correction codes BCH and LDPC to encryption from Flash signal processing to hybrid storage We hope you enjoy this tour inside Solid State Drives
