

Analysis of Food Dyes in Beverages

AP Chemistry Advanced Inquiry Lab

Introduction

Assume an investigative role and design a valid procedure using spectroscopy and graphical analysis to determine the concentration of FD&C food dyes in sports drinks. The investigation will develop and test your skills in **preparing accurate serial dilutions**, **understanding spectroscopic measurements**, and **extrapolating from graphical data**.

Concepts

- Spectroscopy
- Absorbance vs. transmittance
- Wavelength
- Consumer science
- Beer's law
- Solution concentration

Background

The **color** of a solution is an important tool used by scientists to gain information about the composition of the solution. Color is a physical property that is useful for both **qualitative** and **quantitative** analysis. A *qualitative* method yields information about the nature or type of compound in a sample, where as a *quantitative* method provides numerical data for the amount of a compound in a sample.

Spectroscopy is the study of the interaction of light and matter. A spectrophotometer is an instrument that uses electromagnetic radiation from a selected region of the electromagnetic spectrum, such as **ultraviolet**, **visible** or **infrared** light, to analyze the **absorption** or **transmission** of radiation by a sample. The basic function of a spectrophotometer is shown in **Figure 1**. The electromagnetic spectrum (see **Figure 2**) is the entire range of possible wavelengths or frequencies of electromagnetic radiation. In this investigation a visible spectrophotometer will be used—it scans the visible region of the electromagnetic spectrum, from **380 nm to 750 nm**. Typical light sources for visible spectrophotometers include xenon and tungsten lamps.

Dyes & Pigments NIIR Board of Consultants & Engineers, 2005-10-04 Natural dyes are dyes or colorants derived from plants invertebrates or minerals The majority of natural dyes are vegetable dyes from plant sources Dyeing is the process of imparting colors to a textile material Different classes of dyes are used for different types of fiber and at different stages of the textile production process from loose fibers through yarn and cloth to completed garments There are technologies that manufacture the pigments for plastics rubber and cosmetics Therefore dyes and pigments have a vast area of applications and have a huge demand in industry Contrary to popular opinion natural dyes are often neither safer nor more ecologically sound than synthetic dyes They are less permanent more difficult to apply wash out more easily and often involve the use of highly toxic mordant Of course the colour possibilities are far more limited the color of any natural dye may be easily copied by mixing synthetic dyes but many other colors are not easily obtained with natural dyes However some mordant are not very toxic and the idea of natural dyestuffs is aesthetically pleasing Applying natural dyes in your fabric production using enzymes will reduce your production cost and improve control There are various kind of natural dyes quinonoid dyes cyanine dyes azo dyes biflavonyl dyes omochromes anthraquinone coprosma gesus etc The use of natural dyes in cloth making can be seen as a necessary luxury to trigger off a change in habits Dyes which stand out for their beauty and ecological attributes would never be employed on just any material but on noble fabrics such as wool silk linen or cotton made to last more than one season Market value will benefit from consumer preferences for environmentally friendly products which will support consumption of high performance dyes and organic pigments This book basically deals with the use of carotenoids as food colours bianthraquinones and related compounds intermediate degradation products of biflavonyls dyestuffs containing nuclear sulphonic and carboxylic acid groups quinonoid dyes cyanine dyes optical whitening agents natural dyes for food stability of natural colourants in foods effect of additives pyrimidine pigments the total synthesis of the polyene pigments red pigment from geniposidic acid and amino compound effect of acid and amine on the formation of red pigment from geniposidic acid
