CELLS AND TISSUES

Cells are the basic units of structure and function. They are made up of a nucleus, cytoplasm, and cell membrane.

Composition of Cells and Tissues

Cells are made up of a nucleus, cytoplasm, and cell membrane.

Tissues are made up of groups of cells that work together to perform a specific function.

There are four main types of tissues: epithelial, connective, muscle, and nervous.

Epithelial tissue covers the body and lines internal organs.

Connective tissue supports and connects other tissues.

Muscle tissue contracts to move the body.

Nervous tissue carries electrical impulses.

The **axons** of neurons are bundled together to form the **nerve**. Nerves carry signals between different parts of the body.

Neurons are the basic units of the nervous system.

They are made up of a cell body, dendrites, and an axon.

The axon is covered by a myelin sheath, which insulates it.

Neurons are responsible for transmitting information throughout the body.

ORGANS

Organs are structures made up of different tissues that work together to perform a specific function.

Examples of organs include the heart, lungs, liver, stomach, and kidneys.

Heart

The heart is a muscular organ that pumps blood throughout the body.

It is made up of four chambers: the right and left atria and ventricles.

The heart is surrounded by a double-walled sac called the pericardium.

Lungs

The lungs are a pair of organs in the chest that are responsible for breathing.

They are made up of a network of airways and blood vessels.

The lungs are covered by a double-walled sac called the pleura.

The lungs are responsible for exchanging oxygen and carbon dioxide.

The lungs are also responsible for filtering out toxins from the blood.
