

- Shown below is an example of a paraline drawing that uses shade and shadows to reveal the forms and spaces within the interior of a building.
- To determine the shadow cast by a complex subject, break down the form into its simplest geometric components.
- Determine the shadows cast by these components.
- The overall shadow pattern will be a composite of these shadows.
- Note that the sharpest contrast in value should be along the line between the shade or shadow and the adjacent lit surface. Within the shadow or area in shade, there is usually some variation in value due to the reflected light from adjacent lit surfaces.
