Mary Ann Steane

Architecture Of Natural Light:

Daylighting Derek Phillips, 2012-05-23 *Daylighting* offers a general theory and introduction to the use of natural light in architecture. The fourth of Derek Phillips's lighting books draws on his experience to illustrate how best to bring natural light into building design. As sustainability becomes a core principal for designers, daylighting comes to the fore as an alternative to artificial energy consuming light. Here Phillips makes a rational argument for considering daylight first, outlining the arguments in favour of a daylight approach and goes on to show through a series of beautifully illustrated case studies how architects have created buildings in which natural light has been shown to play a major strategic role in the development of the design of a building.

Illuminating Michelle Corrodi, Klaus Spechtenhauser, 2014-03-12 The image of open working and living spaces flooded with light has more than any other become fixed in our minds as a symbol of modernity and the spirit of the times. While the workplace has always been the focus of ergonomic studies and optimization with respect to a good provision of daylight, large glass surfaces have now become the order of the day for living spaces as well. But does this automatically make for better illumination? Taking this question as its starting point, the publication *Illuminating* thematizes central aspects of light planning, including the connection between the provision of daylight and architectural design, building orientation, the nature of the facade, the ground plan, comfort and the proportions and atmosphere of rooms. In the process, general characteristics and fundamental principles as well as subtle facets of an intelligent treatment of daylight are discussed and critically examined within an expanded architecture and culture historical context.

The Architecture of Natural Light Henry Plummer, 2012 This new paperback is the first publication to consider the many effects of natural illumination in contemporary buildings. This comprehensive and thoughtful survey begins with a brief introduction to the history of architecture seen through the advances and experimentation put forward by architects over the centuries.

The Architecture of Light Mary Ann Steane, 2012-11-12 Reviewing the use of natural light by architects in the era of electricity, this book aims to show that natural light not only remains a potential source of order in architecture but that natural lighting strategies impose a usefully creative discipline on design. Considering an approach to environmental context that sees light as a critical aspect of place, this book explores current attitudes to natural light by offering a series of in-depth studies of recent projects and the particular lighting issues they have addressed. It gives a more nuanced appraisal of these lighting strategies by setting them within their broader topographic, climatic and cultural contexts.

Illuminating Michelle Corrodi, Klaus Spechtenhauser, 2014-03 With an analysis of current and historical examples, this title presents the fundamental principles of using daylight in architecture.

Light: A Comprehensive Exploration of Natural Lighting in Architecture Charles Nehme, In the vast expanse of architectural design, the interplay between light and space forms the foundation of our built environment. Natural Light Hestia Thornbrook, 2025-01-04

Natural Light offers a comprehensive exploration of daylight's crucial role in architectural design and human well being addressing the growing disconnect between modern indoor living and our biological need for natural illumination The book uniquely bridges scientific understanding with practical architectural solutions examining how natural light impacts both human health and sustainable building design Through a careful blend of historical context and contemporary research it demonstrates why proper daylighting is not merely an aesthetic choice but a fundamental aspect of human centric architecture The work progresses logically through three main sections beginning with the scientific principles of natural light and its biological effects moving to architectural strategies illustrated through real world case studies and concluding with practical implementation methods for both new construction and renovations Drawing from peer reviewed research in chronobiology and architectural studies the book presents compelling evidence for the importance of natural light in building design while offering specific solutions for common challenges such as light redirecting systems and smart glazing technologies What sets this resource apart is its accessible approach to complex technical concepts making it valuable for both professionals and informed homeowners The book addresses specific challenges across different climate zones and urban contexts providing detailed guidelines for window placement glazing selection and interior layout optimization By connecting architecture with environmental psychology and energy conservation it offers a holistic perspective on creating naturally lit environments that enhance both building performance and occupant well being
