for many years been the most disregarded aspect of all data systems The increase in numbers of telescopes both groundbased and space borne and the increase in efficiency of detectors have generated overwhelming amounts of data Much of these data were and are not used on short timescales and should have been archived where they can be used later and or by others Archiving is essential Objects can change in the course of time New technological or scientific developments might require observing objects again The cost benefit ratio will become more and more important when considering the allocation of telescope time The retrieval of old data can then be crucial At present there are a number of data collections and data retrieval systems This book includes a series of clear and up to date descriptions of many important available data systems For professional astronomers librarians and computer engineers Crafting History Rachel Goshgarian, Ilham Khuri-Makdisi, Ali Yaycioğlu, 2023-03-28 It would not be an overstatement to say that Cemal Kafadar has transformed the field of Ottoman history As a result of his pathbreaking books and articles the field is experiencing a turn within itself as well as recasting its relationship with world history This volume acts as a tribute to Kafadar and the important interdisciplinary work he has both done and inspired in the field In line with the intellectual pluralism that Kafadar has cultivated over his career readers will find a number of articles engaging with a wide range of questions approaches perspectives and sources across Ottoman history Kafadar's students and friends individually or in pairs researched and crafted contributions to this volume with a variety of conceptual premises theoretical approaches and interpretive tools to celebrate his thirty years of teaching research and mentorship in addition to the overwhelming generosity of his intellectual and personal engagement Monthly Catalogue, United States Public Documents ,1987
