

1) Answer: C

Explanation: When you roll two fair six-sided dice, the sample space of the event will have 36 elements since both dice have six possible outcomes ($6 \times 6 = 36$).

The elements of the sample space where the numbers are equal are as follows:

- (1, 1) - this means that the first die results in 1 dot and the second die results in 1 dot.
- (2, 2) - this means that the first die results in 2 dots and the second die results in 2 dots.
- (3, 3) - this means that the first die results in 3 dots and the second die results in 3 dots.
- (4, 4) - this means that the first die results in 4 dots and the second die results in 4 dots.
- (5, 5) - this means that the first die results in 5 dots and the second die results in 5 dots.
- (6, 6) - this means that the first die results in 6 dots and the second die results in 6 dots.

There are 6 total outcomes where the resulting numbers of the dice are equal.

Using the formula for theoretical probability:

$$\text{Probability} = \frac{\text{number of favorable outcomes}}{\text{total number of outcomes}} = \frac{6}{36} = \frac{1}{6}$$

Thus, the answer is $\frac{1}{6}$.

2) Answer: B

Explanation: Obtaining a queen and a spade in a standard deck of cards is a non-mutually exclusive event since it is possible to obtain a card that is both a queen and a spade at the same time (i.e., queen of spades).

We are tasked to find the probability of picking a card that is either a queen or a spade. Take note of the word "or." This means we are looking for the probability of the event that we pick a queen or a spade from the deck of cards.

The formula for the probability that either one of two non-mutually exclusive events to happen is:

$$P(\text{queen or spade}) = P(\text{queen}) + P(\text{spade}) - P(\text{intersection of queen and spade})$$

modeling has become an indispensable tool for ecological research because it is uniquely suited to deal with complexity in a

also explains how to write out properly formulated hierarchical Bayesian models and use them in computing research papers and proposals This primer enables ecologists to understand the statistical principles behind Bayesian modeling and apply them to research teaching policy and management Presents the mathematical and statistical foundations of Bayesian modeling in language accessible to non statisticians Covers basic distribution theory network diagrams hierarchical models Markov chain Monte Carlo and more Deemphasizes computer coding in favor of basic principles Explains how to write out properly factored statistical expressions representing Bayesian models *The Craft of Probabilistic Modelling* J.

Gani,2012-12-06 This book brings together the personal accounts and reflections of nineteen mathematical model builders whose specialty is probabilistic modelling The reader may well wonder why apart from personal interest one should commission and edit such a collection of articles There are of course many reasons but perhaps the three most relevant are i a philosophical interest in conceptual models this is an interest shared by everyone who has ever puzzled over the relationship between thought and reality ii a conviction not unsupported by empirical evidence that probabilistic modelling has an important contribution to make to scientific research and finally iii a curiosity historical in its nature about the complex interplay between personal events and the development of a field of mathematical research namely applied probability Let me discuss each of these in turn Philosophical Abstraction the formation of concepts and the construction of conceptual models present us with complex philosophical problems which date back to Democritus Plato and Aristotle We have all at one time or another wondered just how we think are our thoughts concepts and models of reality approximations to the truth or are they simply functional constructs helping us to master our environment Nowhere are these problems more apparent than in mathematical modelling where idealized concepts and constructions replace the imperfect realities for which they stand
