Volume I Donald L. Hardesty, 2010-06-15 Archaeology is a component of Encyclopedia of Social Sciences and Humanities in the global Encyclopedia of Life Support Systems EOLSS which is an integrated compendium of twenty one Encyclopedias. Archaeology is a road for traveling into the past that is independent of and complementary to documents and memory. The archaeological record provides historical perspectives on variability and change in human life support systems with the potential for use in planning for future sustainable development. The Theme is organized into four different topics which represent the main scientific areas of the theme: Foundations of Archaeology, The Archaeology of Life Support Systems, World Cultural Heritage, Preserving Archaeological Sites and Monuments, which are then expanded into multiple subtopics each as a chapter. The first topic deals with historical methodological and theoretical foundations of archaeology. The second topic explores the archaeological record of human life support systems and includes chapters on foraging, food production such as farming and nomadic lifestyles, civilizations, water management systems and sustainability. World cultural heritage is the third topic. Finally, the fourth topic covers the preservation of cultural memorials such as archaeological sites, landscapes and monuments. These two volumes are aimed at the following five major target audiences: University and College Students, Educators, Professional Practitioners, Research Personnel and Policy Analysts, Managers and Decision Makers, NGOs and GOs.

Practices of Archaeological Stratigraphy Edward C. Harris, 2014-06-28 *Practices of Archaeological Stratigraphy* brings together a number of examples which illustrate the development and use of the Harris Matrix in describing and interpreting archaeological sites This matrix the theory of which is described in two editions of the previous book by Harris *Principles of Archaeological Stratigraphy* made possible for the first time a simple diagrammatic representation of the stratigraphic sequence of a site no matter how complex The Harris Matrix by showing in one diagram all three linear dimensions plus time represents a quantum leap over the older methods
