Using Assistance Class in web dynpro abap

Assistance Class in web dynpro Abap :- Assistance class is a way of writing a separate class and using the functionality or logic defined in its method with a your web dynpro application.

It is useful when you have some piece of logic which is reusable in many places.

plus Assistance class is also used in initialization situation of the WDI application.

You can declare the first in the assistance class and the afterwards can use it in your WDI application.

Concept is almost the same as you want and easy.

You declare a class with some methods having the required functionality.

and can declare some methods with web dynpro want to use them.

and you have to make this class subclass of a class `CL_WD_COMPONENT_ASSISTANCE`.

However this is not a mandatory step but declaring this class as a subclass makes services available in web dynpro framework work.

`WD_ASSIST` attribute will be getting created automatically in each of the controllers in the web dynpro component.

Now lets see one step by step example of working with this feature of assistance class.

1. Go to the se24 and create a class . give a name same and press on create.

Transportation Management with SAP TM 9 Jayant Daithankar,Tejkumar Pandit,2014-08-07 The implementation of a

TMS solution is a highly complex and mission critical project. If executed correctly a good TMS can deliver a number of benefits to the organization in terms of optimization, greater efficiency, reduced errors and improved revenue through accurate invoicing. However, a number of projects fail to realize these benefits for a host of reasons such as an incorrect product selection, over customization of the system and lack of detailed processes. The evaluation and selection of the right transportation management system is a very critical step in the successful implementation of a TMS product as well as ensuring that the organization is able to realize the benefits expected from the system. Transportation Management with SAP TM 9 is a guide for CIO/CXOs evaluating options for various transportation management solutions available in the market and helps in appropriate decision making before committing investment. A proven evaluation framework and guidance provided in the book can help decision makers with product selection and help to create a business case for management approval and design a future roadmap for the organization. The book provides a comprehensive understanding of what SAP transportation management is and is useful for teams involved in TM implementation and roll outs to ensure preparedness. The book explains end to end freight life cycle processes, functional system landscape, implementation challenges and post go live precautions required to optimize investments in SAP TM. Transportation Management with SAP TM 9 also acts as a step by step implementation guide with details of configuration required to set up a TM9 system. This book also covers the upgrade of SAP TM8 to SAP TM9 which will be useful for existing clients who are on TM 8. Nonavailability of SAP TM skilled resources is a major challenge faced by organizations and the book provides a detailed competency building plan along with skill set requirements to create a competent and trained workforce to manage transformation. The current book available in the market on SAP TM is based on Version 6 release which does not cover air freight processes. Our book covers end to end air freight configuration scenarios for logistic companies.

Throughout the world, high profile large organizations, aerospace and defense, automotive, banking, chemicals, financial service providers, healthcare, high tech, insurance, oil and gas, pharmaceuticals, retail, telecommunications and utilities and governments are using SAP software to process their most mission critical, highly sensitive data. With more than 100,000 installations, SAP is the world's largest enterprise software company and the world's third largest independent software supplier overall. Despite this widespread use, there have been very few books written on SAP implementation and security despite a great deal of interest. There are 220,000 members in an on-line SAP community seeking information, ideas and tools on the IT Toolbox Website alone. Managing SAP user authentication and authorizations is becoming more complex than ever as there are more and more SAP products involved that have very different access issues. It's a complex area that requires focused expertise. This book is designed for these network and systems administrators who deal with the complexity of having to make judgmental decisions regarding enormously complicated and technical data in the SAP landscape as well as pay attention to new compliance rules and security regulations. Most SAP users experience significant challenges when

trying to manage and mitigate the risks in existing or new security solutions and usually end up facing repetitive expensive rework and perpetuated compliance challenges This book is designed to help them properly and efficiently manage these challenges on an ongoing basis It aims to remove the Black Box mystique that surrounds SAP security The most comprehensive coverage of the essentials of SAP security currently available risk and control management identity and access management data protection and privacy corporate governance legal and regulatory compliance This book contains information about SAP security that is not available anywhere else to help the reader avoid the gotchas that may leave them vulnerable during times of upgrade or other system changes Companion Web site provides custom SAP scripts which readers can download to install configure and troubleshoot SAP *Implementing SAP® CRM* Vivek Kale,2014-12-03 In today's competitive business environment most companies realize that the better they can manage their customer relationships the more successful they will become Customer Relationship Management CRM software systems are key tools for companies to manage the customer facing processes of their businesses However many companies have resisted implementing this most critical customer oriented application due in large part to the lack of a single point resource on implementing a CRM system This book attempts to fill that gap Implementing SAP CRM will help technologists and managers come to grips with the vision concept and technology of CRM It begins by laying out the groundwork for understanding CRM It explains the concept and context of CRM and the tangible business benefits of CRM adoption Demonstrating a professional approach to the evaluation and selection of SAP it details the critical success factors CSFs patterns and anti patterns of a successful SAP CRM implementation CRM implementations can add significant benefit to the company's bottom line only if the company first transforms itself into a customer centric and customer responsive enterprise This book explains what it means to be a customer centric and responsive enterprise and provides a framework for business operations based on customer relationships rather than the traditional four Ps product positioning price promotion It further spells out business process reengineering BPR strategies to configure internal business processes and operations with SAP CRM to improve customer facing strategies services and relationships
