

Arcs and Central Angles

A central angle is formed when the two sides of an angle meet at the center of a circle.

Each side intersects a point on the circle, dividing it into arcs that are curved lines.

There are three types of arcs:

A minor arc is part of the circle in the interior of the central angle with measure less than 180° .

A major arc is part of the circle in the exterior of the central angle.

Semicircles are congruent arcs whose endpoints lie on the diameter of the circle.
