The book then delves into the core of physiology of individual fitness training, giving instructors a solid base from which to work with clients. Chapters on cardiorespiratory exercise and resistance exercise explain the science and training methods specific to each type of workout, including optimal warm-ups and cool-downs, adaptations, and matters of safety. A chapter on principles of training, including progression, dose-response relationship, specificity, overload, and reversibility, ties all of these concepts together. The second half of the book deals with effective group instruction, specifying how to incorporate the science of training with the art of class leadership. Preparing for delivering and even ending a class come with particular strategies that will boost retention and results, and three chapters on music and choreography take the guesswork out of structuring a routine. Finally, a chapter on stress management offers an overview of the effects of stress on health, symptoms to watch for, and relaxation techniques.
