

Accounting Equation & Answers

Basic Accounting Equation

The accounting equation is the unifying concept in accounting that shows the relationships between and among the accounting elements: assets, liabilities, and capital.

In this lesson, you will learn about the basic accounting equation and how it stays in balance.

Basic Accounting Equation

The resources controlled by a business are referred to as its assets. For a new business, those assets originate from two possible sources:

- Investors who buy ownership in the business
- Creditors who extend loans to the business

Those who contribute assets to a business have legal claims on those assets. Since the total assets of the business are equal to the sum of the assets contributed by investors and the assets contributed by creditors, the following relationship holds and is referred to as the accounting equation :

Assets = Liabilities + Owners' Equity
Resources Claims on the Resources

Initially, owner equity is affected by capital contributions such as the issuance of stock. Once business operations commence, there will be income (revenues minus expenses, and gains minus losses) and perhaps additional capital contributions and withdrawals such as dividends. At the end of a reporting period, these items will impact the owners' equity as follows:

Assets = Liabilities + Owners' Equity
+ Revenues
- Expenses
+ Gains
- Losses
+ Contributions
- Withdrawals

These additional items under owners' equity are tracked in temporary accounts until the end of the accounting period, at which time they are closed to owners' equity.

The accounting equation holds at all times over the life of the business. When a transaction occurs, the total assets of the business may change, but the equation will remain in balance. The accounting equation serves as the basis for the balance sheet, as illustrated in the following example.

Assets

An asset is a resource that is owned or controlled by the company to be used for future benefits. Some assets are tangible like cash while others are theoretical or intangible like goodwill or copyrights. Another common asset is a receivable. This is a promise to be paid from another party.

Liabilities

A liability, in its simplest terms, is an amount of money owed to another person or organization. Said a different way, liabilities are creditors' claims on company assets because this is the amount of assets creditors would own if the company liquidated. A common form of liability is a payable. Payables are the opposite of receivables.
