Crossman, 2024-07-29 Now fully revised and updated Neuroanatomy Illustrated Colour Text Seventh Edition offers a concise yet comprehensive account of the structure and function of the human nervous system Trusted by generations of readers and now in its seventh edition it remains internationally popular as the most succinct clinically relevant and uniquely illustrated textbook available on the subject Carefully targeted to bridge the gap between a brief overview on the one hand and an extensive text on the other this book provides a clear account of neuroanatomical principles It describes normal structure and function and clinically relevant dysfunction all related to conditions which students will encounter in clinical practice This book will make learning easy for medical students junior doctors and specialist trainees needing a sound understanding of the basics of neuroanatomy which underpin the diagnosis and treatment of neurological disorders Straightforward and concise makes notoriously difficult concepts easy to understand Some of the best published illustrations in the field all updated and improved for clarity Perfect for those new to neuroanatomy provides enough detail for students to proceed to clinical studies with confidence Clinical material and topic summaries fully updated and highlighted in summary boxes throughout the text **Seeing, second edition** John P. Frisby, James V. Stone, 2010-04-02 An accessible yet rigorous and generously illustrated exploration of the computational approach to the study of biological vision Seeing has puzzled scientists and philosophers for centuries and it continues to do so This new edition of a classic text offers an accessible but rigorous introduction to the computational approach to understanding biological visual systems The authors of Seeing taking as their premise David Marr's statement that to understand vision by studying only neurons is like trying to understand bird flight by studying only feathers make use of Marr's three different levels of analysis in the study of vision the computational level the algorithmic level and the hardware implementation level Each chapter applies this approach to a different topic in vision by examining the problems the visual system encounters in interpreting retinal images and the constraints available to solve these problems the algorithms that can realize the solution and the implementation of these algorithms in neurons Seeing has been thoroughly updated for this edition and expanded to more than three times its original length It is designed to lead the reader through the problems of vision from the common but mistaken idea that seeing consists just of making pictures in the brain to the minutiae of how neurons collectively encode the visual features that underpin seeing Although it

assumes no prior knowledge of the field some chapters present advanced material This makes it the only textbook suitable for both undergraduate and graduate students that takes a consistently computational perspective offering a firm conceptual basis for tackling the vast literature on vision It covers a wide range of topics including aftereffects the retina receptive fields object recognition brain maps Bayesian perception motion color and stereopsis MatLab code is available on the book s website which includes a simple demonstration of image convolution
