thymus Once within this organ the virus might somehow perturbs central tolerance to the insulin family triggering thus autoimmune T1D Our group contributed with a mini review focusing on cell cell interactions within the thymus involving TECs and thymocytes and the role of the Aire gene on the induction of central tolerance throughout the modulation of TRA expression in mTECs In addition we discuss the recent evidence that Aire also regulate the expression of miRNAs in these cells On its turn the Aire dependent miRNAs might exert control over TRAs We raise issues that besides the transcriptional control exerted by Aire PGE could also be being controlled through posttranscriptional mechanism involving miRNAs A very pertinent question raised by Gabriel Skogberg and cols is on the role of exosomes on TRA presentation by TECs to thymocytes and its implication in the thymocyte selection Exosomes may be liberated by TECs to the extracellular milieu and transport TRAs as well as MHC molecules establishing intercellular communication to enhance antigen presentation to developing thymocytes Authors discuss how intercellular communication via exosomes within the thymus could have consequences on TRA presentation and finally on central tolerance The thymic crosstalk i e the reciprocal control by the close contact between TECs and thymocytes which influences the differentiation of both types of cells was elegantly reviewed by No lla Lopes and cols Authors discuss the role of dendritic cells DCs subsets in the process of deletion of autoreactive T cells and the generation of natural Tregs and raise questions how hematopoietic cells may control the organization of the thymic medulla Thymus is an organ composed of different cell types including TECs DCs macrophages among other cell types and of course thymocytes Recently researchers have identified an unexpected cell type formed by B cells which may be originated from intrathymic B lymphopoiesis or immigration from the periphery Tomoyoshi Yamano and cols contributed with a mini review discussing the role of thymic B cells expressing MHC II CD80 and Aire in the crosstalk with CD4 single positive cells Authors raise questions how these cells might play a role as antigen presenting cells in an unpredicted way within the thymus The regulation of T cell development is apparently well resolved however several unsolved questions remain This important aspect is represented in this Research Topic through the mini review by Iris Caramalho and cols Authors show new questions on the beginning of Treg lineage commitment their spatial localization within the human thymus and their molecular components Cell migration within the thymus is crucial for the central tolerance Developing thymocytes migrate throughout the thymus being exposed initially to the cortex and then to the thymic medulla where they respectively undergo positive and negative selection Chemokines represent key regulators for thymocyte migration Zicheng Hu and cols argue the role of chemokines in the thymic cell migration and induction of central tolerance Thymic atrophy during senescence is widely recognized however poorly understood In addition to the atrophy due to senescence thymus involutes in response to a variety of stimuli including microbial infections The mouse model of *Trypanosoma cruzi* infection corresponds to an adequate mouse model to access this question Leandra Linhares Lacerda and cols show results on the role of miRNAs on regulation of chemotaxis which contribute to a better understanding while incites new issues of thymic involution Cellularity of mTECs is

pivotal for cell cell interactions within the thymus which is required for central tolerance Taishin Akiyama and cols argue the role of cytokines on cellularity of mTECs focusing into the molecular basis of cell cell interactions opening perspective on the use of mathematical models for understanding these processes Thymus morphogenesis is a central point with many open questions The mini review authored by Arnon Dias Jurberg and cols addresses the role of the large superfamily of TGF beta bone morphogenetic protein ligands in the thymus morphogenesis and in T cell differentiation This eBook provides an international and updated insight into the latest developments and open questions on the cellular and molecular bases of central tolerance induction Keywords Index to U.S. Government Technical Reports (permuted Title Index). Ovarian cancer is an umbrella term for a collection of distinct disease entities histotypes Until now the majority of research has focussed on the most common histotype high grade serous ovarian carcinoma HGSOC which accounts for 70% of cases The less common histotypes including endometrioid clear cell mucinous low grade serous carcinosarcoma and non epithelial histotypes have received far less research attention Accordingly while major advances in our understanding of HGSOC have led to molecularly directed therapies that improve patient outcomes progress in less common histotypes has lagged behind Notably many of the uncommon histotypes demonstrate resistance to conventional chemotherapy regimens and their inherent biological differences suggest most are unlikely to respond to emerging molecular therapeutics designed to target the biology of common ovarian cancer types **Imaging Synapse Structure and Function** George J. Augustine,Marc Fivaz,2017-07-06 Development of new imaging technologies in recent years has transformed neuroscience in profound ways Following on the heels of the revolution based on the Green Fluorescent Protein refined genetically encoded fluorescent reporters and genetic targeting strategies now enable optical recording of synaptic transmission in defined neuronal populations at speeds approaching the enviable temporal resolution of electrophysiology Super resolution light microscopy permits observation of synapses and their molecular machinery at sub diffraction resolution At the ultrastructural level automated forms of electron microscopy improvements in specimen fixation methods and recent efforts to correlate data from light and electron micrographs now make the reconstruction of functional neural circuits a reality Finally the use of optogenetic actuators such as channelrhodopsins allows precise temporal and spatial manipulation of neuronal activity and is revealing profound insights into the organization of neural circuits and their roles in behavior This research topic highlights recent advances in both light and electron microscopy with a specific focus on approaches that combine innovations from several different fields to obtain novel information about synapse structure and function We are confident that this collection of articles three original research papers six reviews one methods paper and one perspective article will enable

Knowledge translation is a critical activity that helps transform research results into new practices and policies that benefit health and society Similar to other countries the US has initiated a translational science research program in clinical research and public health In the US the National Institutes of Health NIH and the National Center for Advancing Translational Science NCATS have addressed this challenge through the Clinical and Translational Science Award CTSA Program The charge of the CTSA Program is to transform the organization and infrastructure of the academic research enterprise to facilitate the movement of discoveries from clinical science to the bedside and community Documenting the results of these efforts is a necessary component to assess outcomes health and social impacts and support continuous improvement In the CTSA program the 60 CTSA hubs primarily located at academic health sciences research institutes across the nation are just starting to systematically measure and evaluate the impacts of their activities One example of tracking and assessing impact is the Translational Science Benefits Model TSBM introduced in 2018 which is one of the first frameworks for standardized documentation and dissemination of data on outcomes and impacts of translational science and translational research Additionally this Research Topic will explore and compare models and measurement tools used to assess the impact of translational science research internationally This Research Topic will highlight the use of the Translational Science Benefits Model TSBM and other impact evaluation models applied by investigators across a wide spectrum of medical and public health areas including CTSA hubs community international partners and others Although translational science is still in its infancy much work is being conducted nationally and internationally to integrate impact evaluation on medical and public health practice the economy and health policy In terms of a prevention orientation the TSBM can be used to track program development implementation and impacts on preventing and addressing disease The TSBM framework is also useful for changing the culture of academic research settings to place more value on health and social impacts as well as providing training opportunities for early career investigators on how to design for impact at the beginning of programmatic research The TSBM framework has been successfully deployed within the context of the CTSA Program Sharing successful applications of the TSBM across a wider range of research dissemination and implementation is needed to fully understand its strengths and limitations to refine and improve it further and to study its application in a

variety of contexts Hence this model has the potential to become a standard for systematic comparable reporting of translational science impact on health and societal benefits We aim to identify similar impact models deployed within international research settings The scope of this Research Topic includes advances in data collection methodology analysis and results from the application of the TSBM in the CTSA Program as well as with community and international partners Specific themes might include but are not limited to Development and use of quantitative metrics and qualitative measures using the TSBM TSBM as an educational intervention to train junior investigators on impact in translational science Longitudinal evaluation to show potential and demonstrated impact in specific research areas e g software development public health policy change Integrating social determinants of health disparities and equity in impact evaluation Application of TSBM results to improve operations and translational science in core areas of CTSA hubs TSBM is used to deliver new programs applications and community engagement to build cases in the 4 domains Examples of TSBM used to track research findings into public health practice Examples of international application of the TSBM and other impact models
