Discrete Diversity and Dispersion Maximization Rafael Martí, Anna Martínez-Gavara, 2023-11-16 This book demonstrates the metaheuristic methodologies that apply to maximum diversity problems to solve them. Maximum diversity problems arise in many practical settings from facility location to social network analysis and constitute an important class of NP hard problems in combinatorial optimization. In fact, this volume presents a missing link in the combinatorial optimization related literature. In providing the basic principles and fundamental ideas of the most successful methodologies for discrete optimization, this book allows readers to create their own applications for other discrete optimization problems. Additionally, the book is designed to be useful and accessible to researchers and practitioners in management science, industrial engineering, economics, and computer science, while also extending value to non experts in combinatorial optimization. Owing to the tutorials presented in each chapter, this book may be used in a master course, a doctoral seminar, or as supplementary to a primary text in upper undergraduate courses. The chapters are divided into three main sections. The first section describes a metaheuristic methodology in a tutorial style, offering generic descriptions that when applied create an implementation of the methodology for any optimization problem. The second section presents the customization of the methodology to a given diversity problem, showing how to go from theory to application in creating a heuristic. The final part of the chapters is devoted to experimentation, describing the results obtained with the heuristic when solving the diversity problem. Experiments in the book target the so called MDPLIB set of instances as a benchmark to evaluate the performance of the methods.

Centrality and Diversity in Search M.N. Murty, Anirban Biswas, 2019-08-14 The concepts of centrality and diversity are highly important in search algorithms and play central roles in applications of artificial intelligence, AI, machine learning, ML, social networks, and pattern recognition. This work examines the significance of centrality and diversity in representation, regression, ranking, clustering, optimization, and classification. The text is designed to be accessible to a broad readership. Requiring only a basic background in undergraduate level mathematics, the work is suitable for senior undergraduate and graduate students as well as researchers working in machine learning, data mining, social networks, and pattern recognition.

Biology Joseph S. Levine, Kenneth R. Miller, 1998 **Intelligent Decision Technologies** Rui Neves-Silva, Lakhmi C. Jain, Robert J. Howlett, 2015-06-09 This book presents the 57 papers accepted for presentation at the Seventh KES International Conference on Intelligent Decision Technologies (KES IDT 2015) held in Sorrento, Italy, in June 2015. The conference consists of keynote talks, oral and poster presentations, invited sessions, and workshops on the applications and theory of intelligent decision systems and related areas. The conference provides an opportunity for the presentation and discussion of interesting new research results, promoting knowledge transfer and the generation of new ideas. The book will be of interest to all those whose work involves the development and application of intelligent decision systems.

Scatter Search Manuel Laguna, Rafael Martí, 2012-12-06 The book *Scatter Search* by Manuel Laguna and Rafael Martí represents a

long awaited missing link in the literature of evolutionary methods Scatter Search SS together with its generalized form called Path Relinking constitutes the only evolutionary approach that embraces a collection of principles from Tabu Search TS an approach popularly regarded to be divorced from evolutionary procedures The TS perspective which is responsible for introducing adaptive memory strategies into the metaheuristic literature at purposeful level beyond simple inheritance mechanisms may at first seem to be at odds with population based approaches Yet this perspective equips SS with a remarkably effective foundation for solving a wide range of practical problems The successes documented by Scatter Search come not so much from the adoption of adaptive memory in the range of ways proposed in Tabu Search except where as often happens SS is advantageously coupled with TS but from the use of strategic ideas initially proposed for exploiting adaptive memory which blend harmoniously with the structure of Scatter Search From a historical perspective the dedicated use of heuristic strategies both to guide the process of combining solutions and to enhance the quality of offspring has been heralded as a key innovation in evolutionary methods giving rise to what are sometimes called hybrid or memetic evolutionary procedures The underlying processes have been introduced into the mainstream of evolutionary methods such as genetic algorithms for example by a series of gradual steps beginning in the late 1980s
