

Solving Word Problems by Factoring Polynomial Equations

Area of rectangles, single integer, 2 consecutive integers

The length of a rectangle is 8 more than the width. Its area is 240 ft sq. Write an equation for its area letting w be width. Then solve the equation for w and also find the length.

$$240 = \text{length} \cdot \text{width}$$

$$240 = (w+8)w$$

$$240 = w^2 + 8w$$

$$0 = w^2 + 8w - 240$$

$$0 = (\quad) (\quad)$$

Maple and Mathematica Inna K. Shingareva, Carlos Lizárraga-Celaya, 2010-04-29. In the history of mathematics there are many situations in which cal lations were performed incorrectly for important practical applications. Let us look at some examples the history of computing the number began in Egypt and Babylon about 2000 years BC since then many mathematicians have calculated e g Archimedes Ptolemy Vi ete etc. The rst formula for computing decimal digits of π was disc ered by J Machin in 1706 who was the rst to correctly compute 100 digits of π . Then many people used his method e g W Shanks calculated with 707 digits within 15 years although due to mistakes only the rst 527 were correct. For the next examples we can mention the history of computing the ne structure constant that was rst discovered by A Sommerfeld and the mathematical tables exact lutions and formulas published in many mathematical textbooks were not veri ed rigorously. 25 These errors could have a large e ect on results obtained by engineers. But sometimes the solution of such problems required such techn ogy that was not available at
