Baldassarri,2012-12-06 Algebraic geometry has always been an eclectic science with its roots in algebra function theory and topology Apart from early researches now about a century old this beautiful branch of mathematics has for many years been investigated chiefly by the Italian school which by its pioneer work based on algebro geometric methods has succeeded in building up an imposing body of knowledge Quite apart from its intrinsic interest this possesses high heuristic value since it represents an essential step towards the modern achievements A certain lack of rigour in the classical methods especially

with regard to the foundations is largely justified by the creative impulse revealed in the first stages of our subject the same phenomenon can be observed to a greater or less extent in the historical development of any other science mathematical or non mathematical In any case within the classical domain itself the foundations were later explored and consolidated principally by SEVERI on lines which have frequently inspired further investigations in the abstract field About twenty five years ago B L VAN DER WAERDEN and later O ZARISKI and A WEIL together with their schools established the methods of modern abstract algebraic geometry which rejecting the classical restriction to the complex groundfield gave up geometrical intuition and undertook arithmetisation under the growing influence of abstract algebra *Elementary Algebra* Aaron Freilich, Henry Harris Shanholt, Joel Samuel Georges, 1940
