↘ ↗

$$f(x) = 3 - \frac{1}{2}x + 1$$

LESSON 2-1 PRACTICE

15. Write the equation of the line with y-intercept -4 and a slope of $\frac{3}{2}$. Graph the equation.
16. Write the equation of the line that passes through the point $(-2, -3)$ and has a slope of 5. Graph the equation. 5x
17. **Model with mathematics.** Graph the function $f(x) = 3 - \frac{1}{2}(x - 2)$.
- Use the following information for Items 18–20. Roy already has 10,368 frequent flyer miles, and he will earn 2832 more miles from his round-trip flight to New York City. In addition, he earns 2 frequent flyer miles for each dollar he charges on his credit card.
18. Write the equation of a function $f(d)$ that represents the total number of frequent flyer miles Roy will have after his trip if he charges d dollars on his credit card.
19. Graph the function, using appropriate scales on the axes.
20. **Reason quantitatively.** How many dollars will Roy need to charge on his credit card to have a total of 15,000 frequent flyer miles? Explain how you determined your answer.

Bringing Out the Algebraic Character of Arithmetic Analúcia D. Schliemann, David W. Carraher, Bárbara M. Brizuela, 2006-08-29 Bringing Out the Algebraic Character of Arithmetic contributes to a growing body of research relevant to efforts to make algebra an integral part of early mathematics instruction an area of studies that has come to be known as Early Algebra It provides both a rationale for promoting algebraic reasoning in the elementary school curriculum and empirical data to support it The authors regard Early Algebra not as accelerated instruction but as an approach to existing topics in the early mathematics curriculum that highlights their algebraic character Each chapter shows young learners engaged in mathematics tasks where there has been a shift away from computations on specific amounts toward thinking about relations and functional dependencies The authors show how young learners attempt to work with mathematical generalizations before they have learned formal algebraic notation The book suitable as a text in undergraduate or graduate mathematics education courses includes downloadable resources with additional text and video footage on how students reason about addition and subtraction as functions on how students understand multiplication when it is presented as a function and on how children use notations in algebraic problems involving fractions These three videopapers written text with embedded video footage present relevant discussions that help identify students mathematical reasoning The printed text in the book includes transcriptions of the video episodes in the CD ROM Bringing Out the Algebraic Character of Arithmetic is aimed at researchers practitioners curriculum developers policy makers and graduate students across the mathematics education community who wish to understand how young learners deal with algebra before they have learned about algebraic notation
