Interactive Markov Chains Holger Hermanns, 2003-08-02 Markov Chains are widely used as stochastic models to study a broad spectrum of system performance and dependability characteristics This monograph is devoted to compositional specification and analysis of Markov chains Based on principles known from process algebra the author systematically develops an algebra of interactive Markov chains By presenting a number of distinguishing results of both theoretical and practical nature the author substantiates the claim that interactive Markov chains are more than just another formalism Among other an algebraic theory of interactive Markov chains is developed devise algorithms to mechanize compositional aggregation are presented and state spaces of several million states resulting from the study of an ordinary telephone system are analyzed

Interaction Between Functional Analysis, Harmonic Analysis, and Probability Nigel Kalton, Elias Saab, Stephen Montgomery-Smith, 1995-10-12 Based on a conference on the interaction between functional analysis harmonic analysis and probability theory this work offers discussions of each distinct field and integrates points common to each It examines developments in Fourier analysis interpolation theory Banach space theory probability probability in Banach spaces and more *Finite Mathematics as the Foundation of Classical Mathematics*

and Quantum Theory Felix Lev, 2020-11-03 This book delves into finite mathematics and its application in physics particularly quantum theory It is shown that quantum theory based on finite mathematics is more general than standard quantum theory whilst finite mathematics is itself more general than standard mathematics As a consequence the mathematics describing nature at the most fundamental level involves only a finite number of numbers while the notions of limit infinite infinitesimal and continuity are needed only in calculations that describe nature approximately It is also shown that the concepts of particle and antiparticle are likewise approximate notions valid only in special situations and that the electric charge and baryon and lepton quantum numbers can be only approximately conserved **People and Computers X** M. Cognition Beyond the Brain Stephen J Cowley, Frédéric Vallée-Tourangeau, 2013-06-13 Cognition Beyond the Brain challenges neurocentrism by advocating a systemic view of cognition based on investigating how action shapes the experience of thinking The systemic view steers between extended functionalism and enactivism by stressing how living beings connect bodies technologies language and culture Since human thinking depends on a cultural ecology people connect biologically based powers with extended systems and by so doing they constitute cognitive systems that reach across the skin Biological interpretation exploits extended functional systems Illustrating distributed cognition one set of chapters focus on computer mediated trust work at a construction site judgement aggregation and crime scene investigation Turning to how bodies manufacture skills the remaining chapters focus on interactivity or sense saturated coordination The feeling of doing is crucial to solving maths problems learning about X rays finding an invoice number or launching a warhead in a film People both participate in extended systems and exert individual responsibility Brains manufacture a now to which selves are anchored people can act automatically or at times vary habits and choose to author actions In ontogenesis a systemic view permits rationality to be seen as gaining mastery over world side resources Much evidence and argument thus speaks for reconnecting the study of computation interactivity and human artifice Taken together this can drive a networks revolution that gives due cognitive importance to the perceivable world that lies beyond the brain Cognition Beyond the Brain is a valuable reference for researchers practitioners and graduate students within the fields of Computer Science Psychology Linguistics and Cognitive Science Deriving Object-Oriented Specifications from Algebraic Specifications through Refinement Bastian Dölle, 2007 **A Process Algebraic Approach to Software Architecture Design** Alessandro Aldini, Marco Bernardo, Flavio Corradini, 2010-03-14 In the old formal methods in computer science concurrency theory is receiving a constantly increasing interest This is especially true for process algebra Although it had been originally conceived as a means for reasoning about the semantics of current programs process algebraic formalisms like CCS CSP ACP calculus and their extensions see e g 154 119 112 22 155 181 30 were soon used also for comprehending functional and nonfunctional aspects of the behavior of communicating concurrent systems The scientific impact of process calculi and behavioral equivalences at the base of process algebra is witnessed not only by a very rich literature It is in fact worth mentioning the standardization procedure that led to the development of the process algebraic language LOTOS 49 as well as the implementation of several modeling and analysis tools based on process algebra like CWB 70 and CADP 93 some of which have been used in industrial case studies Furthermore process calculi and behavioral equivalences are by now

adopted in university level courses to teach the foundations of concurrent programming as well as the model driven design of concurrent distributed and mobile systems Nevertheless after 30 years since its introduction process algebra is rarely adopted in the practice of software development On the one hand its technicalities often obfuscate the way in which systems are modeled As an example if a process term comprises numerous occurrences of the parallel composition operator it is hard to understand the communicationscheme among the various subterms On the other hand process algebra is perceived as being difficult to learn and use by practitioners as it is not close enough to the way they think of software systems

Katsuhisa Horimoto, Georg Regensburger, Markus Rosenkranz, Hiroshi Yoshida, 2008-07-30 This volume contains the proceedings of the Third International Conference on Algebraic Biology AB 2008 Jointly organized by the National Institute of Advanced Industrial Science and Technology AIST Tokyo and the Research Institute for Symbolic Computation RISC Hagenberg Austria it was held from July 31 to August 2 2008 in the Castle of Hagenberg Algebraic biology is an interdisciplinary forum for research on all aspects of applying symbolic computation in biology The first conference on algebraic biology AB 2005 was held November 28-30 2005 in Tokyo the second during July 2-4 2007 in Hagenberg The AB conference series is intended as a bridge between life sciences and symbolic computation On the one hand new insights in biology are found by powerful symbolic methods on the other hand biological problems suggest new algebraic structures and algorithms While this profile has been established in the previous proceedings the papers in the present volume demonstrate the continuous growth of algebraic biology We received 27 submissions from 14 countries Australia Austria Canada China Colombia France Germany Italy Japan Norway Russia Switzerland UK USA and 14 papers were accepted for publication Each submission was assigned to at least three Program Committee members who carefully reviewed the papers in many cases with the help of external referees The reviews were discussed by the Program Committee for one week via the EasyChair conference management system
