Luyben,2012-02-08 There are many comprehensive design books but none of them provide a significant number of detailed economic design examples of typically complex industrial processes Most of the current design books cover a wide variety of topics associated with process design In addition to discussing flowsheet development and equipment design these textbooks go into a lot of detail on engineering economics and other many peripheral subjects such as written and oral skills ethics green engineering and product design This book presents general process design principles in a concise readable form that can be easily comprehended by students and engineers when developing effective flow sheet and control structures Ten detailed case studies presented illustrate an in depth and quantitative way the application of these general principles Detailed economic steady state designs are developed that satisfy economic criterion such as minimize total annual cost of both capital and energy or return on incremental capital investment Complete detailed flow sheets and Aspen Plus files are provided Then conventional PI control structures are be developed and tested for their ability to maintain product quality during disturbances Complete Aspen Dynamics files are be provided of the dynamic simulations Case Studies in Food Engineering

J. Peter Clark,2009-08-12 One of the best ways for students or practitioners to learn is through real life example In this volume Clark presents several case studies that can be used not only by those currently working in the industry but as a means for sparking discussion in food engineering classes This book has several purposes 1 to serve as a source of information about a representative collection of food processes with which Clark has had experience 2 to convey some practical lessons about process development and plant design and 3 to serve educators as a resource for class problems and discussion The book is organized in three broad sections The first concerns processes that are primarily physical such as mixing The second concerns processes that also involve biochemical changes such as thermal sterilization The third section

addresses some broader issues that have not been discussed elsewhere including how to tour a plant how to choose among building a new plant expanding or renovating and how to develop processes
