## Shadows

Shadows are made when an object blocks light. The object must be opaque or translucent to make a shadow.

## Long Shadows

The sun casts the longest shadows at the beginning and end of the day, when the sun is at a low point in the sky.

## Short Shadow

The sun casts the shortest shadows at midday, when the sun is at a high point in the sky.

## Sizes

If an object is moved closer to the light source, the shadow gets bigger. If an object is moved further away from the light source, the shadow gets smaller.

## Opaque

Opaque materials do not let any light pass through them. They block the light and make dark shadows. Materials such as wood and stone are opaque.

## Translucent

Translucent materials let some light pass through them. They scatter the light and make light shadows. Materials such as frosted glass and thin paper are translucent.

## Transparent

Transparent materials let light pass through them in straight lines, so that you can see clearly through them. A transparent object like glass will not make a shadow.
