### I. Interactions Foundations CD/Contents/Tissue Level/Anatomy Overviews/Epithelial Tissues

- Where are epithelial tissues found? It covers the external surface of the body; it covers the internal and external organs. It forms secretory components of glands and lines the body cavities.

- Describe these three basic shapes of *epithelial cells*:

*squamous* The cell is very flat with a flattened centrally located nucleus.

*cuboidal* - the cell is cube shaped with a round centrally located nucleus

*columnar*- the cell is rectangle shape with an oval centrally located nucleus

- What is the *apical surface* of epithelial tissue? What is the function of *microvilli* and *cilia* located on this surface?

Apical surface is exposed to the outside environment, the body cavity or the inner surface of hollow organs. Microvilli are finger like extensions of the cytoplasm and increase surface absorption. Cilia are hair like extensions of the apical surface. Designed to move substances across the surface.

- Describe the positional relationship between the *epithelial surface cells*, *basal surface*, *basement membrane*, and *connective tissue*. *epithelial surface cell* is the free surface or surface exposed; the *basal surface* is the bottom of the cell with underlying tissues below and *basement membrane* is the membrane between epithelial and underlying connective tissue

- Describe each of the following *epithelial tissue* arrangements:

*simple*: contain single layer of cells. Each cell contacts the *basement membrane*

D. Walker, D. Christopher Brooks, Kem Saichaie, Christina I. Petersen, 2023-07-03 While Active Learning Classrooms or ALCs offer rich new environments for learning they present many new challenges to faculty because among other things they eliminate the room's central focal point and disrupt the conventional seating plan to which faculty and students have become accustomed The importance of learning how to use these classrooms well and to capitalize on their special features is paramount The potential they represent can be realized only when they facilitate improved learning outcomes and engage students in the learning process in a manner different from traditional classrooms and lecture halls This book provides an introduction to ALCs briefly covering their history and then synthesizing the research on these spaces to provide faculty with empirically based practical guidance on how to use these unfamiliar spaces effectively Among the questions this book addresses are How can instructors mitigate the apparent lack of a central focal point in the space What types of learning activities work well in the ALCs and take advantage of the affordances of the room How can teachers address familiar classroom management challenges in these unfamiliar spaces If assessment and rapid feedback are critical in active learning how do they work in a room filled with circular tables and no central focus point How do instructors balance group learning with the needs of the larger class How can students be held accountable when many will necessarily have their backs facing the instructor How can instructors evaluate the effectiveness of their teaching in these spaces This book is intended for faculty preparing to teach in or already working in this new classroom environment for administrators planning to create ALCs or experimenting with provisionally designed rooms and for faculty developers helping teachers transition to using these new spaces      **Anatomy & Physiology with Brief Atlas of the Human Body and Quick Guide to the Language of Science and Medicine - E-Book** Kevin T.
