Loring,1997-01-01 The techniques of universal algebra are applied to the category of C algebras An important difference central to this book is that one can consider approximate representations of relations and approximately commuting diagrams Moreover the highly algebraic approach does not exclude applications to very geometric C algebras K theory is avoided but universal properties and stability properties of specific C algebras that have applications to K theory are considered Index theory arises naturally and very concretely as an obstruction to stability for almost commuting matrices Multiplier algebras are studied in detail both in the setting of rings and of C algebras Recent results about extensions of C algebras are discussed including a result linking amalgamated products with the Busby Hochschild theory **New Learning Composite Mathematics 8** S.K.
