Figure 1 A comparison of the two methods for the calculation of the effective number of species. The figure is divided into two columns: **old method** and **new method**.

Old method:

- Species pool
- Species-area curve
- Effective number of species

New method:

- Species pool
- Species-energy curve
- Effective number of species

The figure illustrates that the new method, which incorporates the energy of the system, provides a more accurate calculation of the effective number of species compared to the old method, which only considers the species-area relationship.
