Algorithmics of Matching Under Preferences David F. Manlove, 2013 Matching problems with preferences are all around us OCo they arise when agents seek to be allocated to one another on the basis of ranked preferences over potential outcomes Efficient algorithms are needed for producing matchings that optimise the satisfaction of the agents according to their preference lists In recent years there has been a sharp increase in the study of algorithmic aspects of matching problems with preferences partly reflecting the growing number of applications of these problems worldwide This book describes the most important results in this area providing a timely update to The Stable Marriage Problem Structure and Algorithms D Gusfield and R W Irving MIT Press 1989 in connection with stable matching problems whilst also broadening the scope to include matching problems with preferences under a range of alternative optimality criteria

Real-World Algorithms Panos Louridas, 2017-03-17 An introduction to algorithms for readers with no background in advanced mathematics or computer science emphasizing examples and real world problems Algorithms are what we do in order not to have to do something Algorithms consist of instructions to carry out tasks usually dull repetitive ones Starting from simple building blocks computer algorithms enable machines to recognize and produce speech translate texts categorize and summarize documents describe images and predict the weather A task that would take hours can be completed in virtually no time by using a few lines of code in a modern scripting program This book offers an introduction to

algorithms through the real world problems they solve The algorithms are presented in pseudocode and can readily be implemented in a computer language The book presents algorithms simply and accessibly without overwhelming readers or insulting their intelligence Readers should be comfortable with mathematical fundamentals and have a basic understanding of how computers work all other necessary concepts are explained in the text After presenting background in pseudocode conventions basic terminology and data structures chapters cover compression cryptography graphs searching and sorting hashing classification strings and chance Each chapter describes real problems and then presents algorithms to solve them Examples illustrate the wide range of applications including shortest paths as a solution to paragraph line breaks strongest paths in elections systems hashes for song recognition voting power Monte Carlo methods and entropy for machine learning Real World Algorithms can be used by students in disciplines from economics to applied sciences Computer science majors can read it before using a more technical text Guide to Programming and Algorithms Using R Özgür Ergül,2013-07-23 This easy to follow textbook provides a student friendly introduction to programming and algorithms Emphasis is placed on the threshold concepts that present barriers to learning including the questions that students are often too embarrassed to ask The book promotes an active learning style in which a deeper understanding is gained from evaluating questioning and discussing the material and practised in hands on exercises Although R is used as the language of choice for all programs strict assumptions are avoided in the explanations in order for these to remain applicable to other programming languages Features provides exercises at the end of each chapter includes three mini projects in the final chapter presents a list of titles for further reading at the end of the book discusses the key aspects of loops recursions program and algorithm efficiency and accuracy sorting linear systems of equations and file processing requires no prior background knowledge in this area

Guide To Temporal Networks Naoki Masuda, Renaud Lambiotte, 2016-07-28 Network science offers a powerful language to represent and study complex systems composed of interacting elements from the Internet to social and biological systems In its standard formulation this framework relies on the assumption that the underlying topology is static or changing very slowly as compared to dynamical processes taking place on it e g epidemic spreading or navigation Fuelled by the increasing availability of longitudinal networked data recent empirical observations have shown that this assumption is not valid in a variety of situations Instead often the network itself presents rich temporal properties and new tools are required to properly describe and analyse their behaviour A Guide to Temporal Networks presents recent theoretical and modelling progress in

the emerging field of temporally varying networks and provides connections between different areas of knowledge required to address this multi disciplinary subject After an introduction to key concepts on networks and stochastic dynamics the authors guide the reader through a coherent selection of mathematical and computational tools for network dynamics Perfect for students and professionals this book is a gateway to an active field of research developing between the disciplines of applied mathematics physics and computer science with applications in others including social sciences neuroscience and biology

The Constitution of Algorithms Florian Jatón, 2021-04-27 A laboratory study that investigates how algorithms come into existence Algorithms often associated with the terms big data machine learning or artificial intelligence underlie the technologies we use every day and disputes over the consequences actual or potential of new algorithms arise regularly In this book Florian Jatón offers a new way to study computerized methods providing an account of where algorithms come from and how they are constituted investigating the practical activities by which algorithms are progressively assembled rather than what they may suggest or require once they are assembled
