

6. The subroutine CHAR_TO_CODE(character) returns the integer ASCII value of a character. For example:

CHAR_TO_CODE('a') returns the value 97

CHAR_TO_CODE('z') returns the value 122

CHAR_TO_CODE(' ') returns the value 96

CHAR_TO_CODE('(') returns the value 123

Develop an algorithm, using either pseudo-code or a flowchart, that:

- asks the user to enter a character
- outputs 'LOWER' if the user has entered a lowercase character
- outputs 'NOT LOWER' if the user has entered any other character.

You must use the built-in CHAR_TO_CODE subroutine in your answer

```

character ← USERINPUT
character_code ← CHAR_TO_CODE(character)
IF character_code ≥ 97 AND character_code ≤ 122
    OUTPUT 'LOWER'
ELSE
    OUTPUT 'NOT LOWER'
ENDIF

Advances in Open Domain Question Answering Tomek Strzalkowski, Sanda Harabagiu, 2006-10-07 Automated question answering the ability of a machine to answer questions simple or complex posed in ordinary human language is one of today's most exciting technological developments. It has all the markings of a disruptive technology: one that is poised to displace the existing search methods and establish new standards for user-centered access to information. This book gives a comprehensive and detailed look at the current approaches to automated question answering. The level of presentation is suitable for newcomers to the field as well as for professionals wishing to study this area and/or to build practical QA systems. The book can serve as a how-to handbook for IT practitioners and system developers. It can also be used to teach advanced graduate courses in Computer Science, Information Science, and related disciplines. The readers will acquire in depth practical knowledge of this critical new technology.

Algorithms: Main Ideas and Applications Vladimir Uspensky, A.L. Semenov, 2013-03-14 Today the notion of the algorithm is familiar not only to mathematicians. It forms a conceptual base for information processing: the existence of a corresponding algorithm makes automatic information processing possible. The theory of algorithms together with mathematical logic forms the theoretical basis for modern computer science. See Sem Us 86. This article is called *Mathematical Logic in Computer Science and Computing Practice* and in its title mathematical logic is understood in a broad sense including the theory of algorithms. However, not everyone realizes that the word algorithm includes a transformed toponym. Khorezm Algorithms were named after a great scientist of medieval East: al-Khwarizmi, where al-Khwarizmi means from Khorezm. He lived between c. 783 and 850 B.C. and the year 1983 was chosen to celebrate his 1200th birthday. A short biography of al-Khwarizmi compiled in the tenth century starts as follows: al-Khwarizmi. His name is Muhammad ibn Musa; he is from Khoresm, cited according to Bul Rozen, Ah 83, p. 8.
