

Question 3 (adapted from Horngren’s Cost Accounting: A Managerial Emphasis, 9th Canadian edition):

The Quality Chocolatess (Quality) uses a job-costing system with two direct cost categories: direct materials and direct manufacturing labour- abbreviated to DM and DL, respectively. It also has one manufacturing overhead cost pool, which they abbreviate to MOH.

Quality allocates its MOH using DL costs and provides you with the following information:

	Budget for the year	Actuals for the year
DM	\$1,800,000	\$1,740,000
DL	2,600,000	2,540,000
MOH	2,210,000	2,311,400

1. Compute the actual and budgeted manufacturing overhead rates for the year.
2. You were given the following information:
 - a. job A-13:
DM used: \$48,000
DL: \$27,000
Compute the cost of Job A-13 using (a) an actual-costing system and (b) a normal-costing system.
3. Compute under- or over-allocated MOH using Quality’s normal-costing system. Comment on your results and explain them. Would your results be different if actual costing was used? If not, why not? And if they would be different, explain why.

Information Quality and Management Accounting Stephan Leitner,2013-01-24 One of the main aims of management accounting is to provide managers with accurate information in order to provide a good basis for decision making There is evidence that the information provided by management accounting systems MAS is distorted and the occurrence of biases in accounting information is widely accepted among users of MAS At the same time the intensity and the frequency of use of MAS increase too Consequently the quality of the provided information is critical The focus of this simulation study is twofold On the one hand the impact of the sophistication of traditional costing systems on error propagation in the case of a set of

input biases is investigated On the other hand the impact of single and multiple input biases on the quality of the information provided by traditional costing systems is focused In order to investigate the research questions a simulation approach is applied

The Measurement Nightmare Debra Smith,1999-12-22 Today s competitive environment requires that companies distinguish themselves in the marketplace using factors other than prices Companies that excel at on time delivery short cycle leadtime quality and fast response to the market gain a competitive edge and have the ability to market based on these features A proven approach to achieve this is the Theory of Constraints TOC production solution known as drum buffer rope scheduling Just in time JIT Total Quality Management TQM and other philosophies aim at exploiting these competitive edge factors However accounting systems financial and incentive measurements continue to be the biggest stumbling blocks to companies wishing to improve their financial performance with these tools Agreement on the need for a measurement system that encourages local actions in line with bottom line results is common but solutions have remained elusive Whether a company is pursuing JIT TQM or TOC cost accounting is the common enemy Attempts have been made to introduce new costing methods such as activity based costing and economic value added but they have failed to recognize the basic difference between product costing for financial statement purposes and collective management information to make real time decisions The Measurement Nightmare shows you how to resolve the conflicts and remove the accounting systems financial and incentive measurement roadblocks to adopting TOC thereby gaining improved performance and sustaining competitive advantage The techniques that the author leading authority Debra Smith has implemented and tracked at various companies highlight the productivity measurement nightmare Especially important are the day to day tools she developed to ensure successful implementation
