

Problem 1 – Mathematics (Analytic Geometry)

Find the distance from the point (5, -3) to the line $7x - 4y - 28 = 0$.

Solution:

$$d = \frac{Ax_1 + By_1 + C_1}{\sqrt{A^2 + B^2}}$$

$$d = \frac{(-) (7x_1 - 4y_1 + 28)}{(-) \sqrt{(7)^2 + (-4)^2}}$$

$$d = \frac{7(5) - 4(-3) - 28}{\sqrt{65}}$$

$$d = 2.36$$

Problem 2 – Mathematics (Analytic Geometry)

Find the area bounded by the line $2x - y + 10 = 0$ and the coordinate axes.

Solution:

$$2x - y + 10 = 0$$

$$\begin{array}{ll} \text{when } x = 0 & y = 10 \\ & y = 0 \quad x = -5 \end{array}$$

$$A = \frac{5(10)}{2}$$

$$A = 25$$

Sciences, Engineering, and Medicine,Division on Engineering and Physical Sciences,Board on Mathematical Sciences and
Their Applications,Committee on Analytical Research Foundations for the Next-Generation Electric Grid,2016-05-15
Electricity is the lifeblood of modern society and for the vast majority of people that electricity is obtained from large
interconnected power grids However the grid that was developed in the 20th century and the incremental improvements
made since then including its underlying analytic foundations is no longer adequate to completely meet the needs of the 21st
century The next generation electric grid must be more flexible and resilient While fossil fuels will have their place for
decades to come the grid of the future will need to accommodate a wider mix of more intermittent generating sources such
as wind and distributed solar photovoltaics Achieving this grid of the future will require effort on several fronts There is a
need for continued shorter term engineering research and development building on the existing analytic foundations for the
grid But there is also a need for more fundamental research to expand these analytic foundations Analytic Research
Foundations for the Next Generation Electric Grid provide guidance on the longer term critical areas for research in
mathematical and computational sciences that is needed for the next generation grid It offers recommendations that are

designed to help direct future research as the grid evolves and to give the nation's research and development infrastructure the tools it needs to effectively develop test and use this research

Integrated Fault Seal Analysis S. Ogilvie, S. Dee, R.W. Wilson, W. Bailey, 2020-08-03 Faults commonly trap fluids such as hydrocarbons and water and therefore are of economic significance During hydrocarbon field development smaller faults can provide baffles and or conduits to flow There are relatively simple well established workflows to carry out a fault seal analysis for siliciclastic rocks based primarily on clay content There are however outstanding challenges related to other rock types to calibrating fault seal models with static and dynamic data and to handling uncertainty The variety of studies presented here demonstrate the types of data required and workflows followed in today's environment in order to understand the uncertainties risks and upsides associated with fault related fluid flow These studies span all parts of the hydrocarbon value chain from exploration to production but are also of relevance for other industries such as radioactive waste and CO2 containment *Design Solutions for nZEB Retrofit Buildings* Rynska, Elzbieta, Kozminska, Urszula, Zinowiec-Cieplik, Kinga, Rucinska, Joanna, Szybinska-Matusiak, Barbara, 2018-03-02 Construction projects once they are completed are intended to exist in the skylines of cities and towns for decades Sustainable technologies seek to take these existing structures and make them environmentally friendly and energy efficient Design Solutions for nZEB Retrofit Buildings is a critical scholarly resource that examines the importance of creating architecture that not only promotes the daily function of
