

THE SKELETON
The skeleton is the framework of the body, supporting the soft organs and tissues. It is composed of bones and cartilage. The bones are made of a hard, white, mineralized substance called bone tissue. The cartilage is a soft, white, jelly-like substance. The skeleton is divided into the axial skeleton (skull, spine, and rib cage) and the appendicular skeleton (arms and legs).

THE MUSCLES
The muscles are the soft tissue that contracts to move the bones. They are made of muscle fibers. The muscles are divided into the skeletal muscles (attached to bones) and the smooth muscles (not attached to bones). The skeletal muscles are voluntary muscles, meaning they can be controlled by the conscious mind. The smooth muscles are involuntary muscles, meaning they cannot be controlled by the conscious mind.

THE JOINTS
The joints are the points where two bones meet. They allow the bones to move relative to each other. There are three main types of joints: ball-and-socket joints, hinge joints, and pivot joints. Ball-and-socket joints allow for the greatest range of motion. Hinge joints allow for flexion and extension. Pivot joints allow for rotation.

THE NERVOUS SYSTEM
The nervous system is the body's communication system. It consists of the brain, spinal cord, and nerves. The brain is the control center of the body. The spinal cord is a long, thin, tube-like structure that runs down the back. The nerves are thin, white, thread-like structures that carry messages between the brain and the rest of the body.

THE ENDOCRINE SYSTEM
The endocrine system is the body's chemical messaging system. It consists of the thyroid gland, pituitary gland, and other glands. The thyroid gland is located in the neck. The pituitary gland is located at the base of the brain. The glands release hormones into the bloodstream, which then travel to the target organs.

THE IMMUNE SYSTEM
The immune system is the body's defense system. It consists of the white blood cells, antibodies, and other immune cells. The white blood cells are small, white, round cells that circulate in the bloodstream. The antibodies are Y-shaped proteins that bind to foreign substances called antigens. The immune cells are cells that attack and destroy foreign invaders.

THE SENSORY SYSTEM
The sensory system is the body's ability to sense the environment. It consists of the eyes, ears, nose, tongue, and skin. The eyes are the organs of sight. The ears are the organs of hearing. The nose is the organ of smell. The tongue is the organ of taste. The skin is the organ of touch.
