Mathematical Cognition Wolfgang Grodd,Philippe Chassy,2016-08-09 Despite the importance of mathematics in our educational systems little is known about how abstract mathematical thinking emerges Under the uniting thread of mathematical development we hope to connect researchers from various backgrounds to provide an integrated view of abstract mathematical cognition Much progress has been made in the last 20 years on how numeracy is acquired Experimental psychology has brought to light the fact that numerical cognition stems from spatial cognition The findings from neuroimaging and single cell recording experiments converge to show that numerical representations take place in the intraparietal sulcus Further research has demonstrated that supplementary neural networks might be recruited to carry out subtasks for example the retrieval of arithmetic facts is done by the angular gyrus Now that the neural networks in charge of basic mathematical cognition are identified we can move onto the stage where we seek to understand how these basics skills are used to support the acquisition and use of abstract mathematical concepts Disha Combo (3 books) Olympiad Champs Science, Mathematics, English Class 8 with Past 12 Year Questions with Chapter-wise Previous 12 Year (2013 - 2024)

Klein, Klaus F Willmes - von Hinckeldey, Karin Kucian, 2015-02-24 Living at the beginning of the 21st century requires being numerate because numerical abilities are not only essential for life prospects of individuals but also for economic interests of post industrial knowledge societies Thus numerical development is at the core of both individual as well as societal interests There is the notion that we are already born with a very basic ability to deal with small numerosities Yet this often called number sense seems to be very restricted approximate and driven by perceptual constraints During our numerical development in formal e g school but also informal contexts e g family street we acquire culturally developed abstract symbol systems to represent exact numerosities in particular number words and Arabic digits refining our numerical capabilities In recent years numerical development has gained increasing research interest documented in a growing number of behavioural neuro scientific educational cross cultural and neuropsychological studies addressing this issue Additionally our understanding of how numerical competencies develop has also benefitted considerably from the advent of different neuro imaging techniques allowing for an evaluation of developmental changes in the human brain In sum we are now starting to put together a more and more coherent picture of how numerical competencies develop and how this development is associated with neural changes as well In the end this knowledge might also lead to a better understanding of the reasons for atypical numerical development which often has grievous consequences for those who suffer from developmental dyscalculia or mathematics learning disabilities Therefore this Research Topic deals with all aspects of numerical development findings from behavioural performance to underlying neural substrates from cross sectional to longitudinal evaluations from healthy to clinical populations To this end we included empirical contributions using different experimental methodologies but also theoretical contributions review articles or opinion papers

Post-2020 Climate Action Shinichiro Fujimori, Mikiko Kainuma, Toshihiko Masui, 2017-09-16 This book summarizes assessments of the Paris Agreement to provide an excellent introduction to this research field The AIM CGE Asia Pacific Integrated Modeling Computable General Equilibrium model which is the core of AIM modeling framework is used for the assessment The first part focuses on global issues presenting both short term a few decades and long term century scale assessments in the context of the Agreement's ultimate climate goal It also discusses policy implementation and climate risk Part 2 is a collection of assessments of individual Asian countries providing insights into the national situations and detailed analyses It includes contributions from Asian countries as well as NIES National Institute for Environmental Studies Japan members The main conclusion is that many countries require changes to their energy systems change and societal transformation in order to meet emissions targets Part 3 describes in detail the AIM CGE model which is used to evaluate the climate and energy policies by simulating the future economic and energy and environmental situation in the Asia Pacific region This section can be used as a standard text on CGE modelling in climate change mitigation
