Response of Douglas-fir Seedlings to Nitrogen, Sulfur, and Phosphorus Fertilizers M. A. Radwan,1985 *Transport and Interactions of Chlorides in Cement-based Materials* Caijun Shi,Qiang Yuan,Fuqiang He,Xiang Hu,2019-07-26 Chloride induced corrosion is the most important durability issue of reinforced concrete structures and the prediction and prevention of chloride induced corrosion has attracted considerable interest all over the world Given that chloride penetrates through the concrete cover the issues concerning its transport are crucial These include testing methods prediction and the prevention of ingress During the transport process physical and chemical interaction occurs between chloride and cement hydrates which in turn affects the further transport so the transport of chloride and these interactions are closely related and underpin our understanding of chloride induced corrosion in RC structures This book provides in depth discussion of chloride transport and its interaction in cement based materials and reviews and summarizes the state of the art The mechanisms and testing methods for chloride transport chemical interactions of chloride with cement hydrates chloride binding isotherms measurement of penetration depths factors affecting chloride transport and modeling of chloride transport are discussed in detail This book serves as a reference for researchers or engineer and a textbook for graduate students Tailoring Surfaces Nicholas D. Spencer,2011 The focus of the book is the modification of surfaces to tailor them for a specific purpose Using this method of surface modification materials chosen for their bulk properties tensile strength temperature stability density price can be optimized for any particular application which can lead to improved hardness biological inertness or activity corrosion resistance low or high friction or adhesion water repellency or wettability or catalytic activity The works of the author many of his crucial papers are included touches upon these surface properties and spans fields including catalysis analytical surface science self assembled monolayers tribology biomaterials superhydrophobicity and polymer coatings *Synthesis of Solid Catalysts* Krijn P. de Jong,2009-06-22 This practical book combines recent progress with a discussion of the general aspects of catalyst preparation The first part deals with the basic principles of solid catalyst preparation explaining the main aspects of sol gel

chemistry and interfacial chemistry followed by such techniques as co precipitation and immobilization New tools for catalyst preparation research including microspectroscopy and high throughput experimentation are also taken into account The second part heightens the practical relevance by providing six case studies on such topics as the preparation of zeolites hydrotreating catalysts methanol catalysts and gold catalysts

Polymer Science: A Comprehensive Reference

,2012-12-05 The progress in polymer science is revealed in the chapters of Polymer Science A Comprehensive Reference Ten Volume Set In Volume 1 this is reflected in the improved understanding of the properties of polymers in solution in bulk and in confined situations such as in thin films Volume 2 addresses new characterization techniques such as high resolution optical microscopy scanning probe microscopy and other procedures for surface and interface characterization Volume 3 presents the great progress achieved in precise synthetic polymerization techniques for vinyl monomers to control macromolecular architecture the development of metallocene and post metallocene catalysis for olefin polymerization new ionic polymerization procedures and atom transfer radical polymerization nitroxide mediated polymerization and reversible addition fragmentation chain transfer systems as the most often used controlled living radical polymerization methods Volume 4 is devoted to kinetics mechanisms and applications of ring opening polymerization of heterocyclic monomers and cycloolefins ROMP as well as to various less common polymerization techniques Polycondensation and non chain polymerizations including dendrimer synthesis and various click procedures are covered in Volume 5 Volume 6 focuses on several aspects of controlled macromolecular architectures and soft nano objects including hybrids and bioconjugates Many of the achievements would have not been possible without new characterization techniques like AFM that allowed direct imaging of single molecules and nano objects with a precision available only recently An entirely new aspect in polymer science is based on the combination of bottom up methods such as polymer synthesis and molecularly programmed self assembly with top down structuring such as lithography and surface templating as presented in Volume 7 It encompasses polymer and nanoparticle assembly in bulk and under confined conditions or influenced by an external field including thin films inorganic organic hybrids or nanofibers Volume 8 expands these concepts focusing on applications in advanced technologies e g in electronic industry and centers on combination with top down approach and functional properties like conductivity Another type of functionality that is of rapidly increasing importance in polymer science is introduced in volume 9 It deals with various aspects of polymers in biology and medicine including the response of living cells and tissue to the contact with biofunctional particles and surfaces The last volume is devoted to the scope and potential provided by environmentally benign and green polymers as well as energy related polymers They discuss new technologies needed for a sustainable economy in our world of limited resources Provides broad and in depth coverage of all aspects of polymer science from synthesis polymerization properties and characterization methods and techniques to nanostructures sustainability and energy and biomedical uses of polymers Provides a definitive source for those entering or researching in this area by
