

DBQ 13: THE TRAGIC PRELUDE TO WAR

Historical Background

Since the birth of the United States, the North and South divisions of the country have cultivated diverse cultures, economies, religious values, and traditions. Still, it was the reliance on slave labor that lodged the conflict between both of the regions. On one hand, the South needed the institution of slavery to keep up with the needs of its plantations. On the other hand, the North sustained itself with factories and had a minimal desire for slaves. This growth of industrialization spurred disagreement on behalf of the Northern states and the dispute intensified with the creation of the Compromise of 1850 and the Kansas-Nebraska Act. Both pieces of legislation added new states to the Union. Advocates of slavery believed these laws would provide a chance to establish more slave states. In contrast, adversaries of slavery deemed that the institution should not expand into other regions. Over the course of time, both sides retaliated—the North with the abolitionist movement and the South with its threats of secession. Eventually, the South would attempt to dissolve the Union and begin the American Civil War.

SECTION 1

to learn and participate In addition they provide useful information in considering what alternatives in education and work make most sense for individuals and influence views about groups of students educational programs and a wide range of issues For all of these reasons it is important that tests assess fairly and reflect accurately the ways young people are and are not achieving as well as desired The test performance of women and men is a research topic of historical interest and has received much attention in recent years Because of this increased interest there is a great deal of new research and data available The purpose of the study presented in this volume was to review this new information with two objectives in mind to clarify patterns of gender difference and similarity in test performance and related achievements and to see what implications those findings might have for fair assessment and as a corollary examine the assessment process as a possible source of gender differences This study is interested in tests used in education to assess developed knowledge and skill In order to gain a broader view of gender similarity and difference the contributors looked at other types of measures and other characteristics of young women and men Their hope is to contribute to a firmer basis for insuring fairness in tests an objective which is particularly important as the field moves increasingly to new forms of assessment in which there is less experience
