Paulus, 2023-05-15 The increasing role and power of artificial intelligence in our lives and world requires us to imagine and shape a desirable future with this technology Since visions of AI often draw from Christian apocalyptic narratives current discussions about technological hopes and fears present an opportunity for a deeper engagement with Christian eschatological resources This book argues that the Christian apocalyptic imagination can transform how we think about and use AI helping us discover ways artificial agency may participate in new creation Theorising Future Conflict Mark Lacy, 2023-12-15 This book explores the changing tactics technologies and terrains of twenty first century war It argues that the world in 2049 is unlikely to look like the climate change artificial intelligence AI dystopia depicted in *Blade Runner* 2049 but nor will it be a world where conflict and war has been transformed by a civilising process that eradicates violence and conflict from the human condition 2049 is also the year that the US Department of Defense has suggested China will become a world shaping military power All states will be engaged in arms races across a variety of new tools and technologies from drones robotics AI and quantum computing that will transform politics economy society and war Drawing on thinkers such as Zygmunt Bauman and Paul Virilio the book suggests that future war will be shaped by three broad tendencies that include a broad range of tactics technologies and trends the impure the granular and the machinic Through discussions of

cybersecurity urban war robotics AI climate change science fiction and new strategic concepts it examines how these tendencies might evolve in the different geopolitical futures and types of war ahead of us The book provides a thought provoking and distinctive framework through which to think about the changing character of war It concludes that for all the novel and dangerous challenges ahead the futuristic possibilities of warfare will likely continue to be shaped by problems familiar to students of international relations and the history of war albeit problems that will play out in geopolitical and technological contexts that we have never encountered before This book will be of much interest to students of critical war studies security studies science and technology studies and International Relations in general **The Coming Wave**
